

From showcase to first order

TEST–MAKE–BUY–LEARN turns a prototype into a first order with accountability, acceptance, maintenance, and exit

Provisional rough geometry · customers / sites / costs / approvals unconfirmed · regenerate when official data arrives

REVIEW STATUS
FORMAL-REVIEW-READY

EVIDENCE
13 sections · 10 scenarios · 9 layer types

LIMIT
Provisional rough geometry—not a statutory redline

Space as a production line

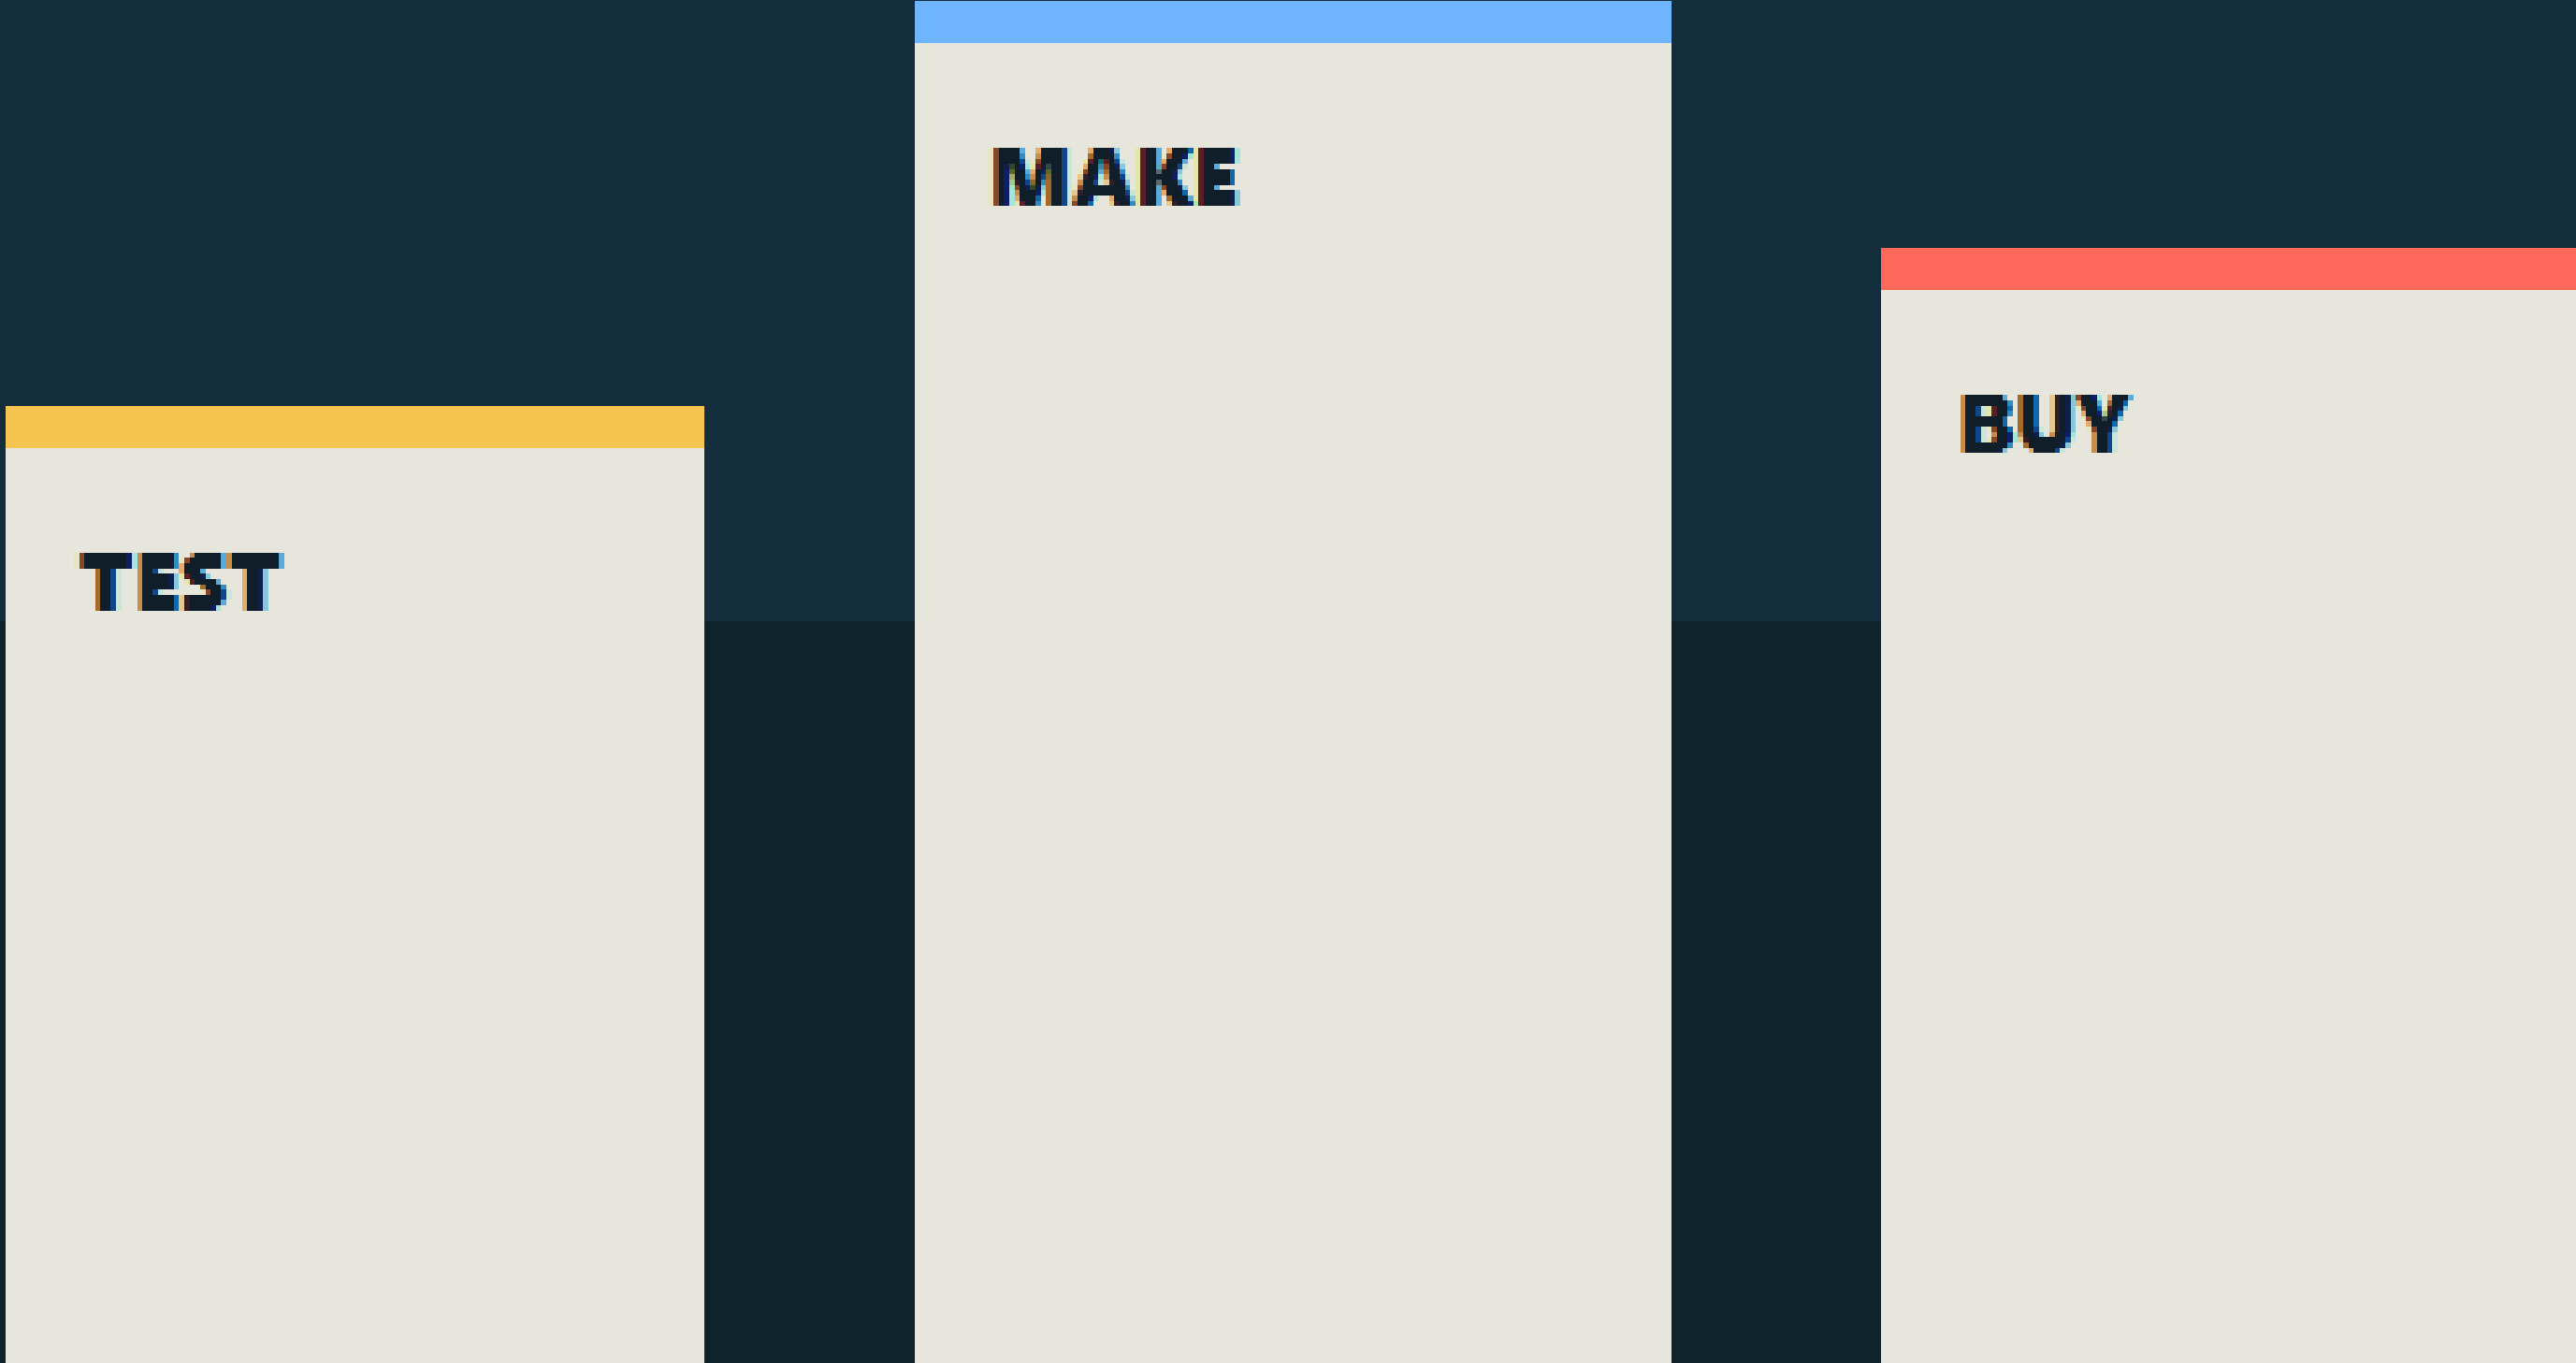

Zhongzhiyuan tests · AI Origin makes · Dazhongsi buys · the Railway Heritage Park learns; provisional geometry never becomes statutory control

01 Trustworthy testing + R&D

02 Continuous public learning

03 Prototype + first-order services

04 Community + non-digital fallback

existing stock first

reversible

staffed fallback

Provisional rough geometry—not a statutory redline

Three landmarks that work

Landmarks are operating devices: the First Failure Archive, Open Prototype House, and First-Order Hall produce evidence, maintainability, and customer decisions

01 · ZHONGZHIYUAN · TEST

First Failure Archive

Publishes the problem, boundary, failure class, repair or exit—never personal data or trade secrets.

OUTPUT → test passport

02 · AI ORIGIN · MAKE

Open Prototype House

Shared assembly and repair; teams leave a BOM, logs, a maintainer, and a non-AI fallback.

OUTPUT → BOM + fallback

03 · DAZHONGSI · BUY

First-Order Hall

Open service edge + three real-use bays + controlled takeover, repair, and data-isolation back zone.

OUTPUT → contract / no-buy

Provisional rough geometry · customers / sites / costs / approvals unconfirmed · regenerate when official data arrives

Ten scenarios, three first tests

The first cohort covers accessible movement, building operations, and small-business coordination, always with staffed fallback and stop rights

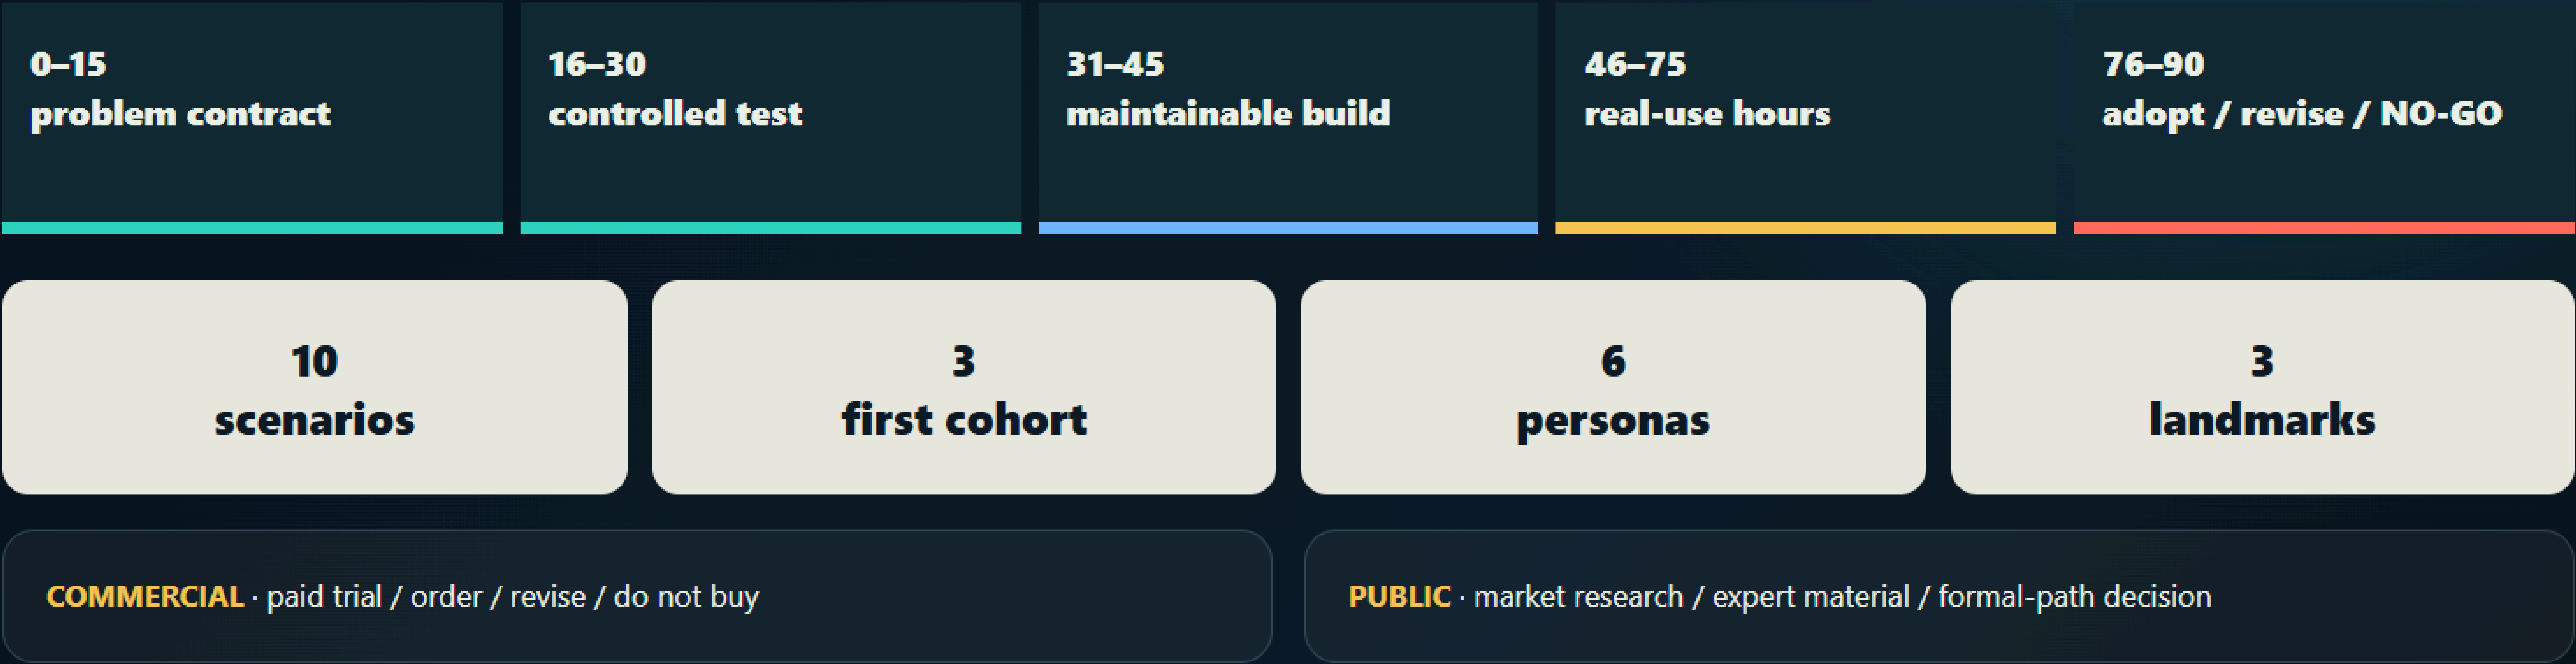

FIRST COHORT · FOC-S01 Accessible exception	FIRST COHORT · FOC-S02 Building warning	FIRST COHORT · FOC-S03 Small-business service	CANDIDATE · FOC-S04 Embodied-AI transition	CANDIDATE · FOC-S05 Data-rights red team
CANDIDATE · FOC-S06 Maintenance takeover	CANDIDATE · FOC-S07 Heritage inspection	CANDIDATE · FOC-S08 Multilingual co-review	CANDIDATE · FOC-S09 First-solution test	CANDIDATE · FOC-S10 Failure evidence archive
non-AI baseline	minimum data	human takeover	independent retest	appeal + exit

First-cohort outline ≠ recruited customer or approved project. Every card remains subject to baseline, customer, site, data, and legal validation.

Provisional rough geometry · customers / sites / costs / approvals unconfirmed · regenerate when official data arrives

90 days: evidence before expansion

The commercial track may seek a bounded paid order; the public track prepares a formal-path decision, not a 90-day procurement promise

Provisional rough geometry · customers / sites / costs / approvals unconfirmed · regenerate when official data arrives
