

EVO-RAIL

MICROLOOP — Site Overview & Three-Loop Network

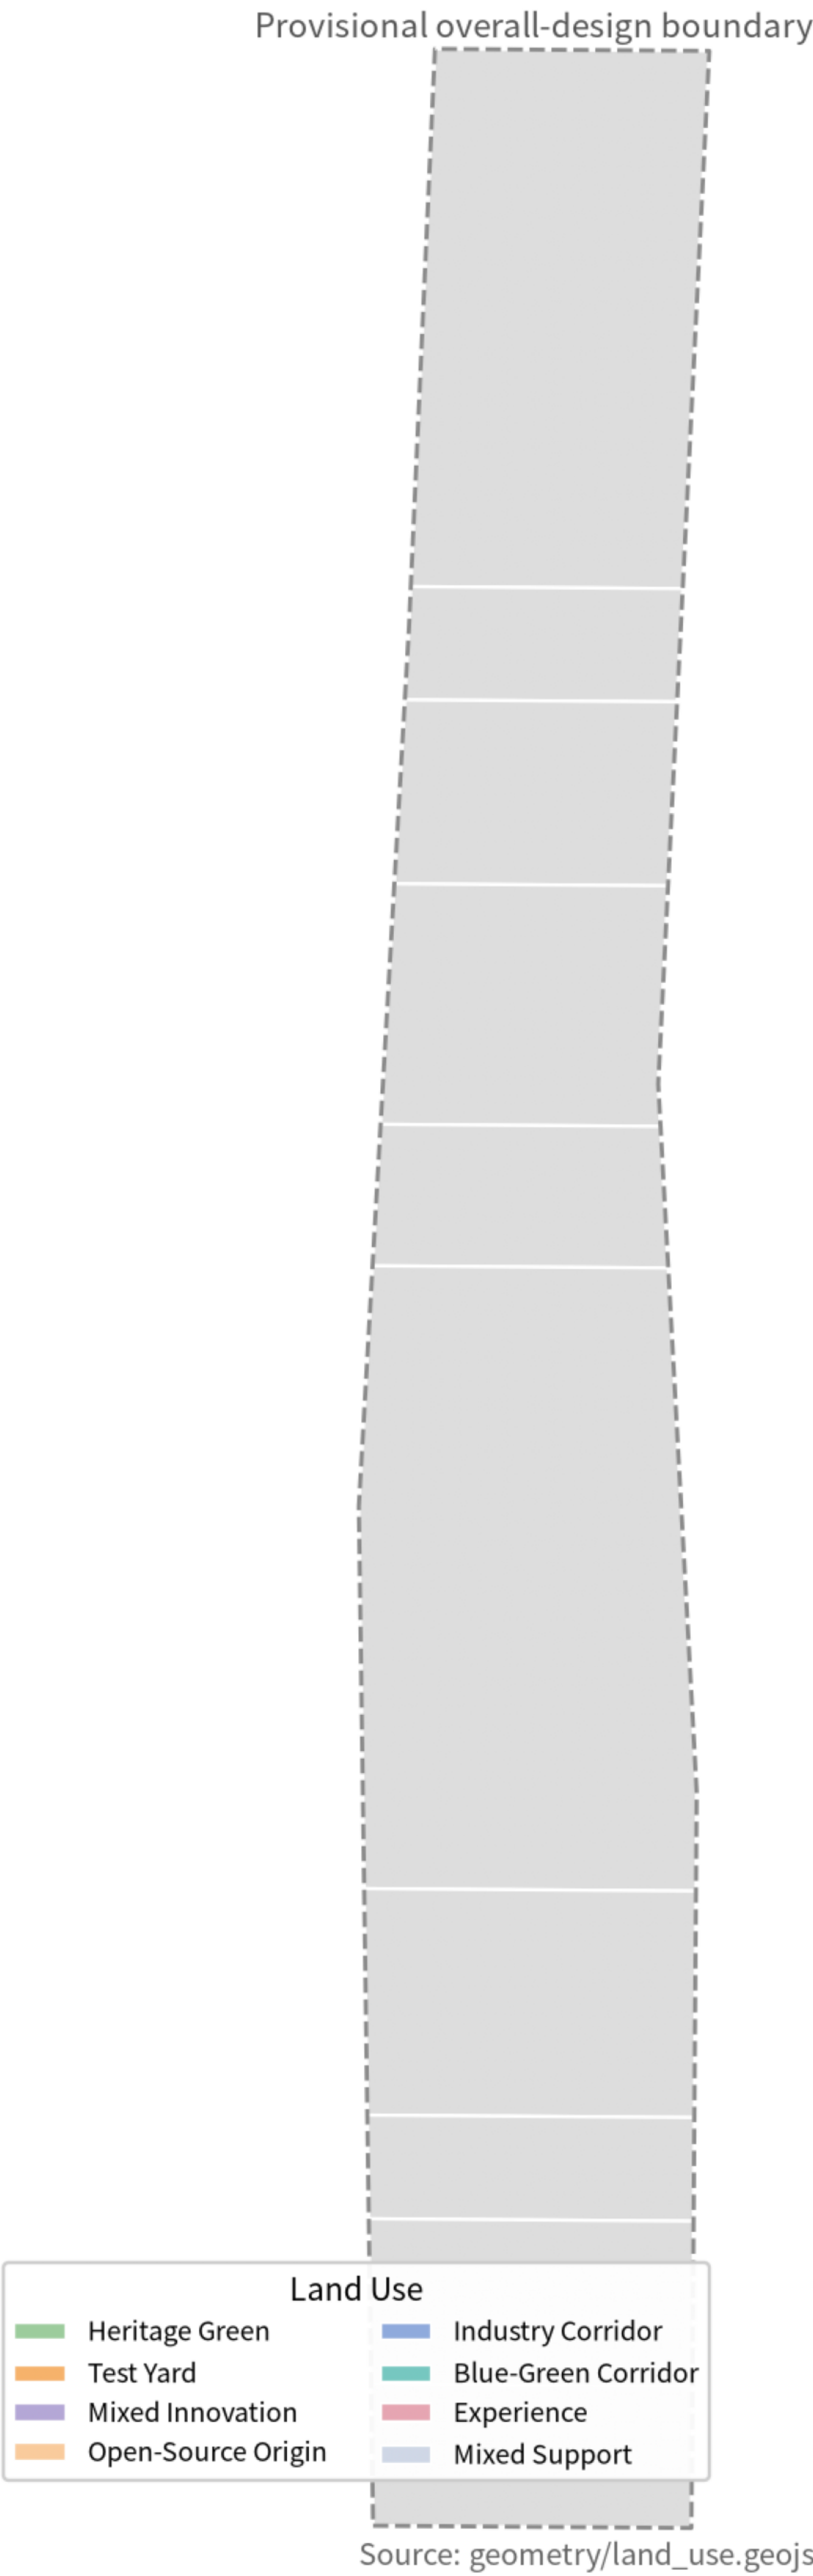

Provisional overall-design boundary

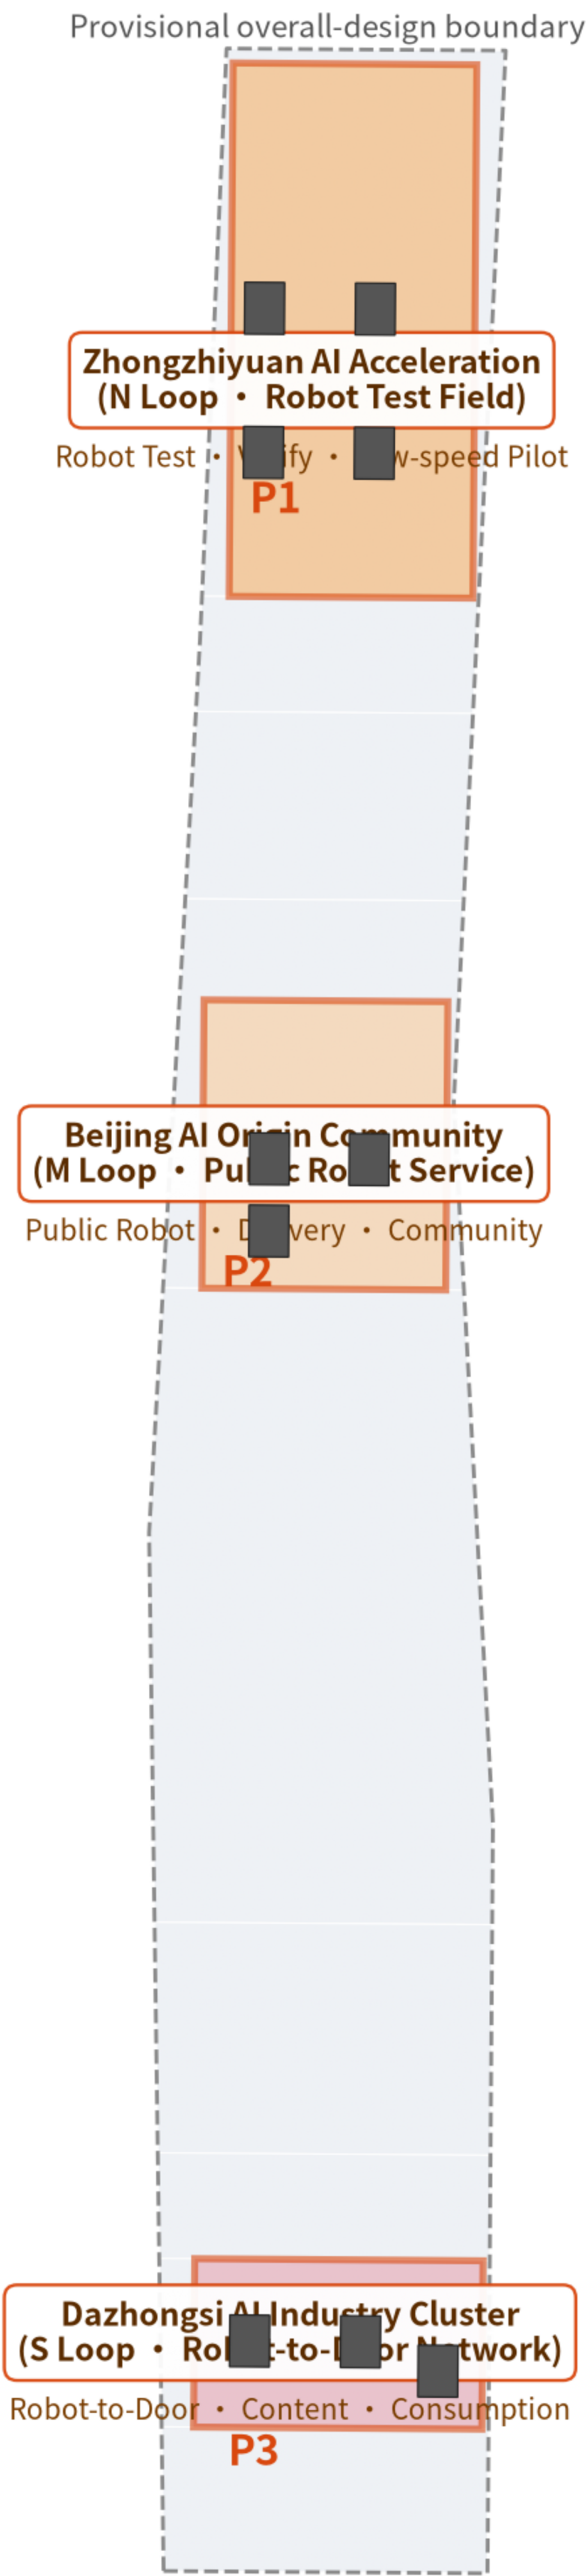

Source: this package geometry/*.geojson (EPSG:4548). Provisional constraint, not an official redline; conceptual proposal. Total area $\approx 11.41 \text{ km}^2$.

Green spine • station zones

Three Scopes • Robot-Service & Green Corridor Zones

Three Key Areas • Robot Micro-Loop Detail (provisional)

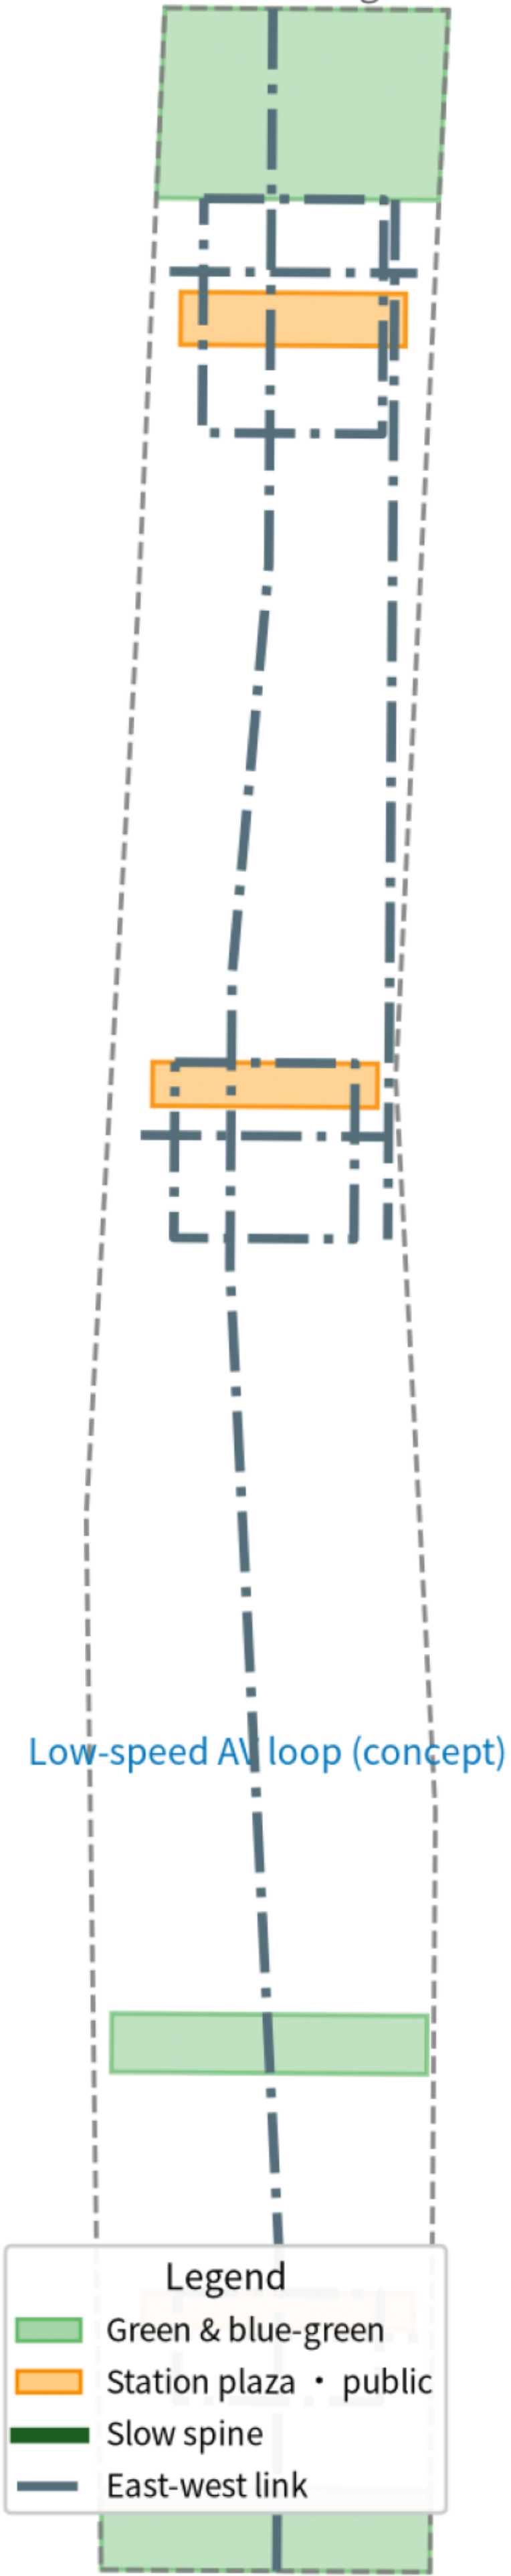

The three key areas are provisional constraints, directional design only; whole package recalculated when official polygons are released.

Slow priority • blue-green loop

Mobility • Blue-Green Network & Robot Hubs

Provisional overall-design boundary

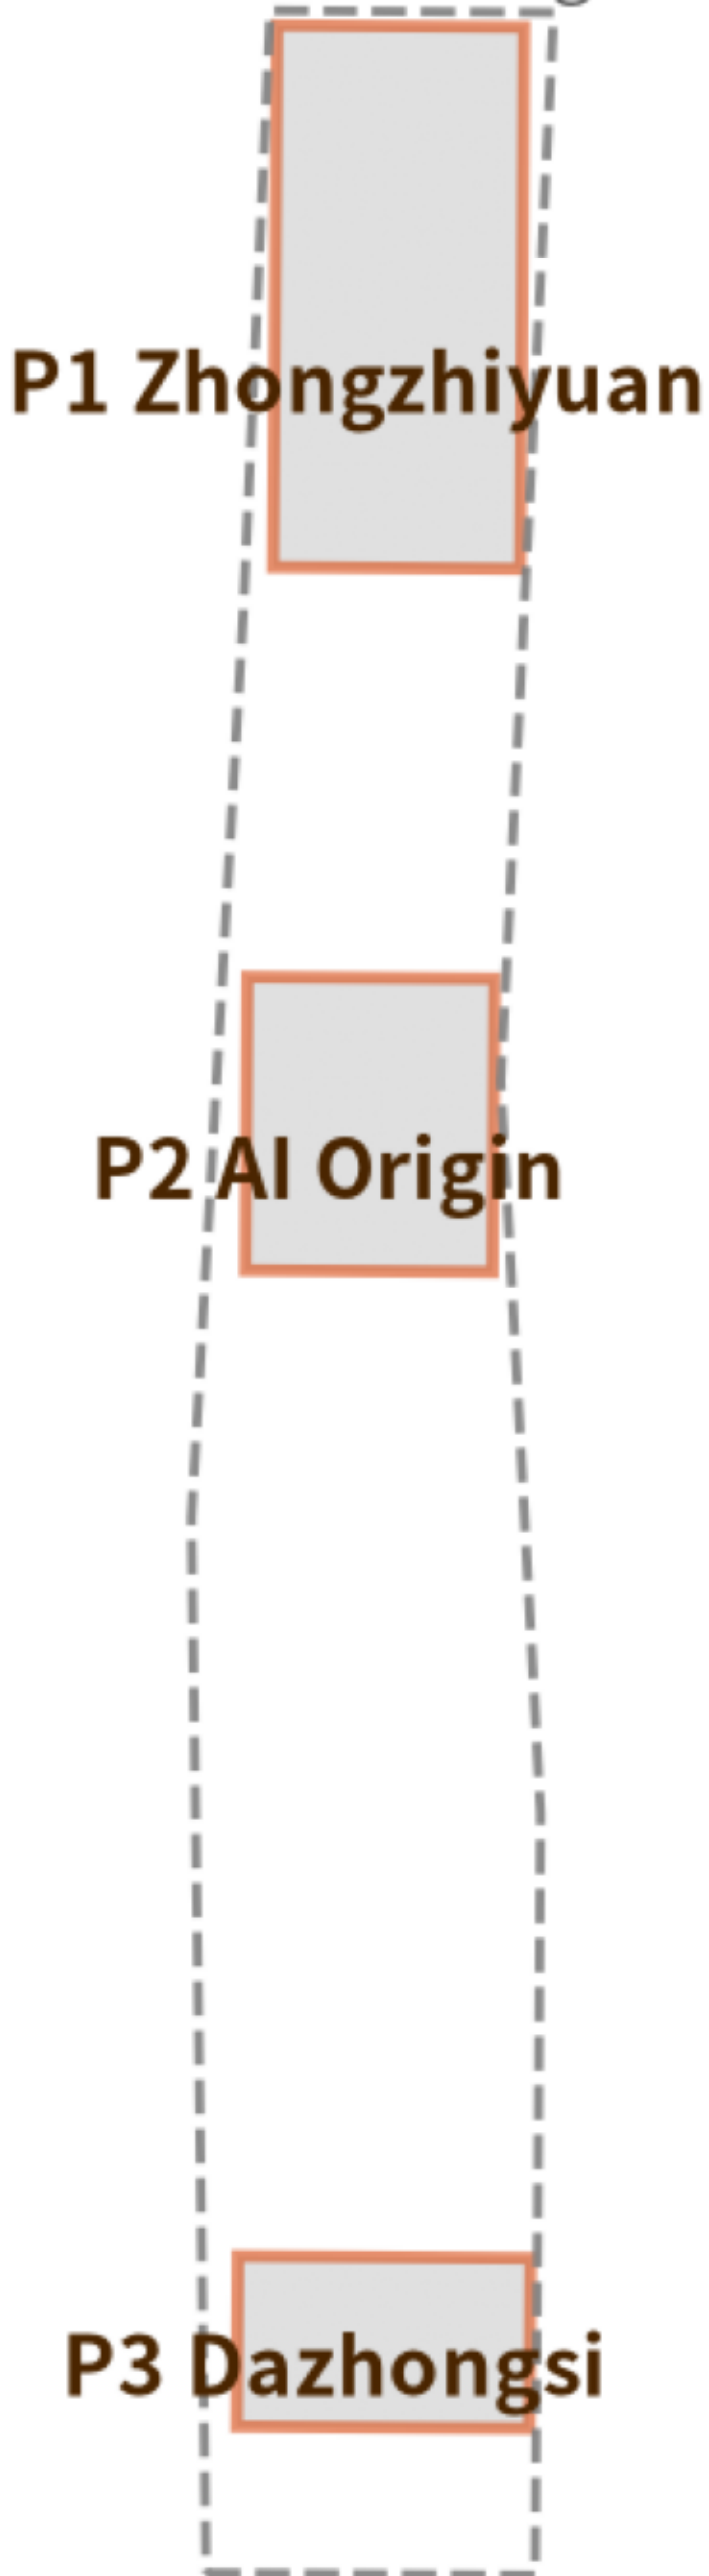

Source: geometry/roads.geojson, green_space.geojson, public_space.geojson (EPSG:4548). Three low-speed robot loops + east-west connectors; provisional boundary. road≈24.9km • green≈13% • public≈4%

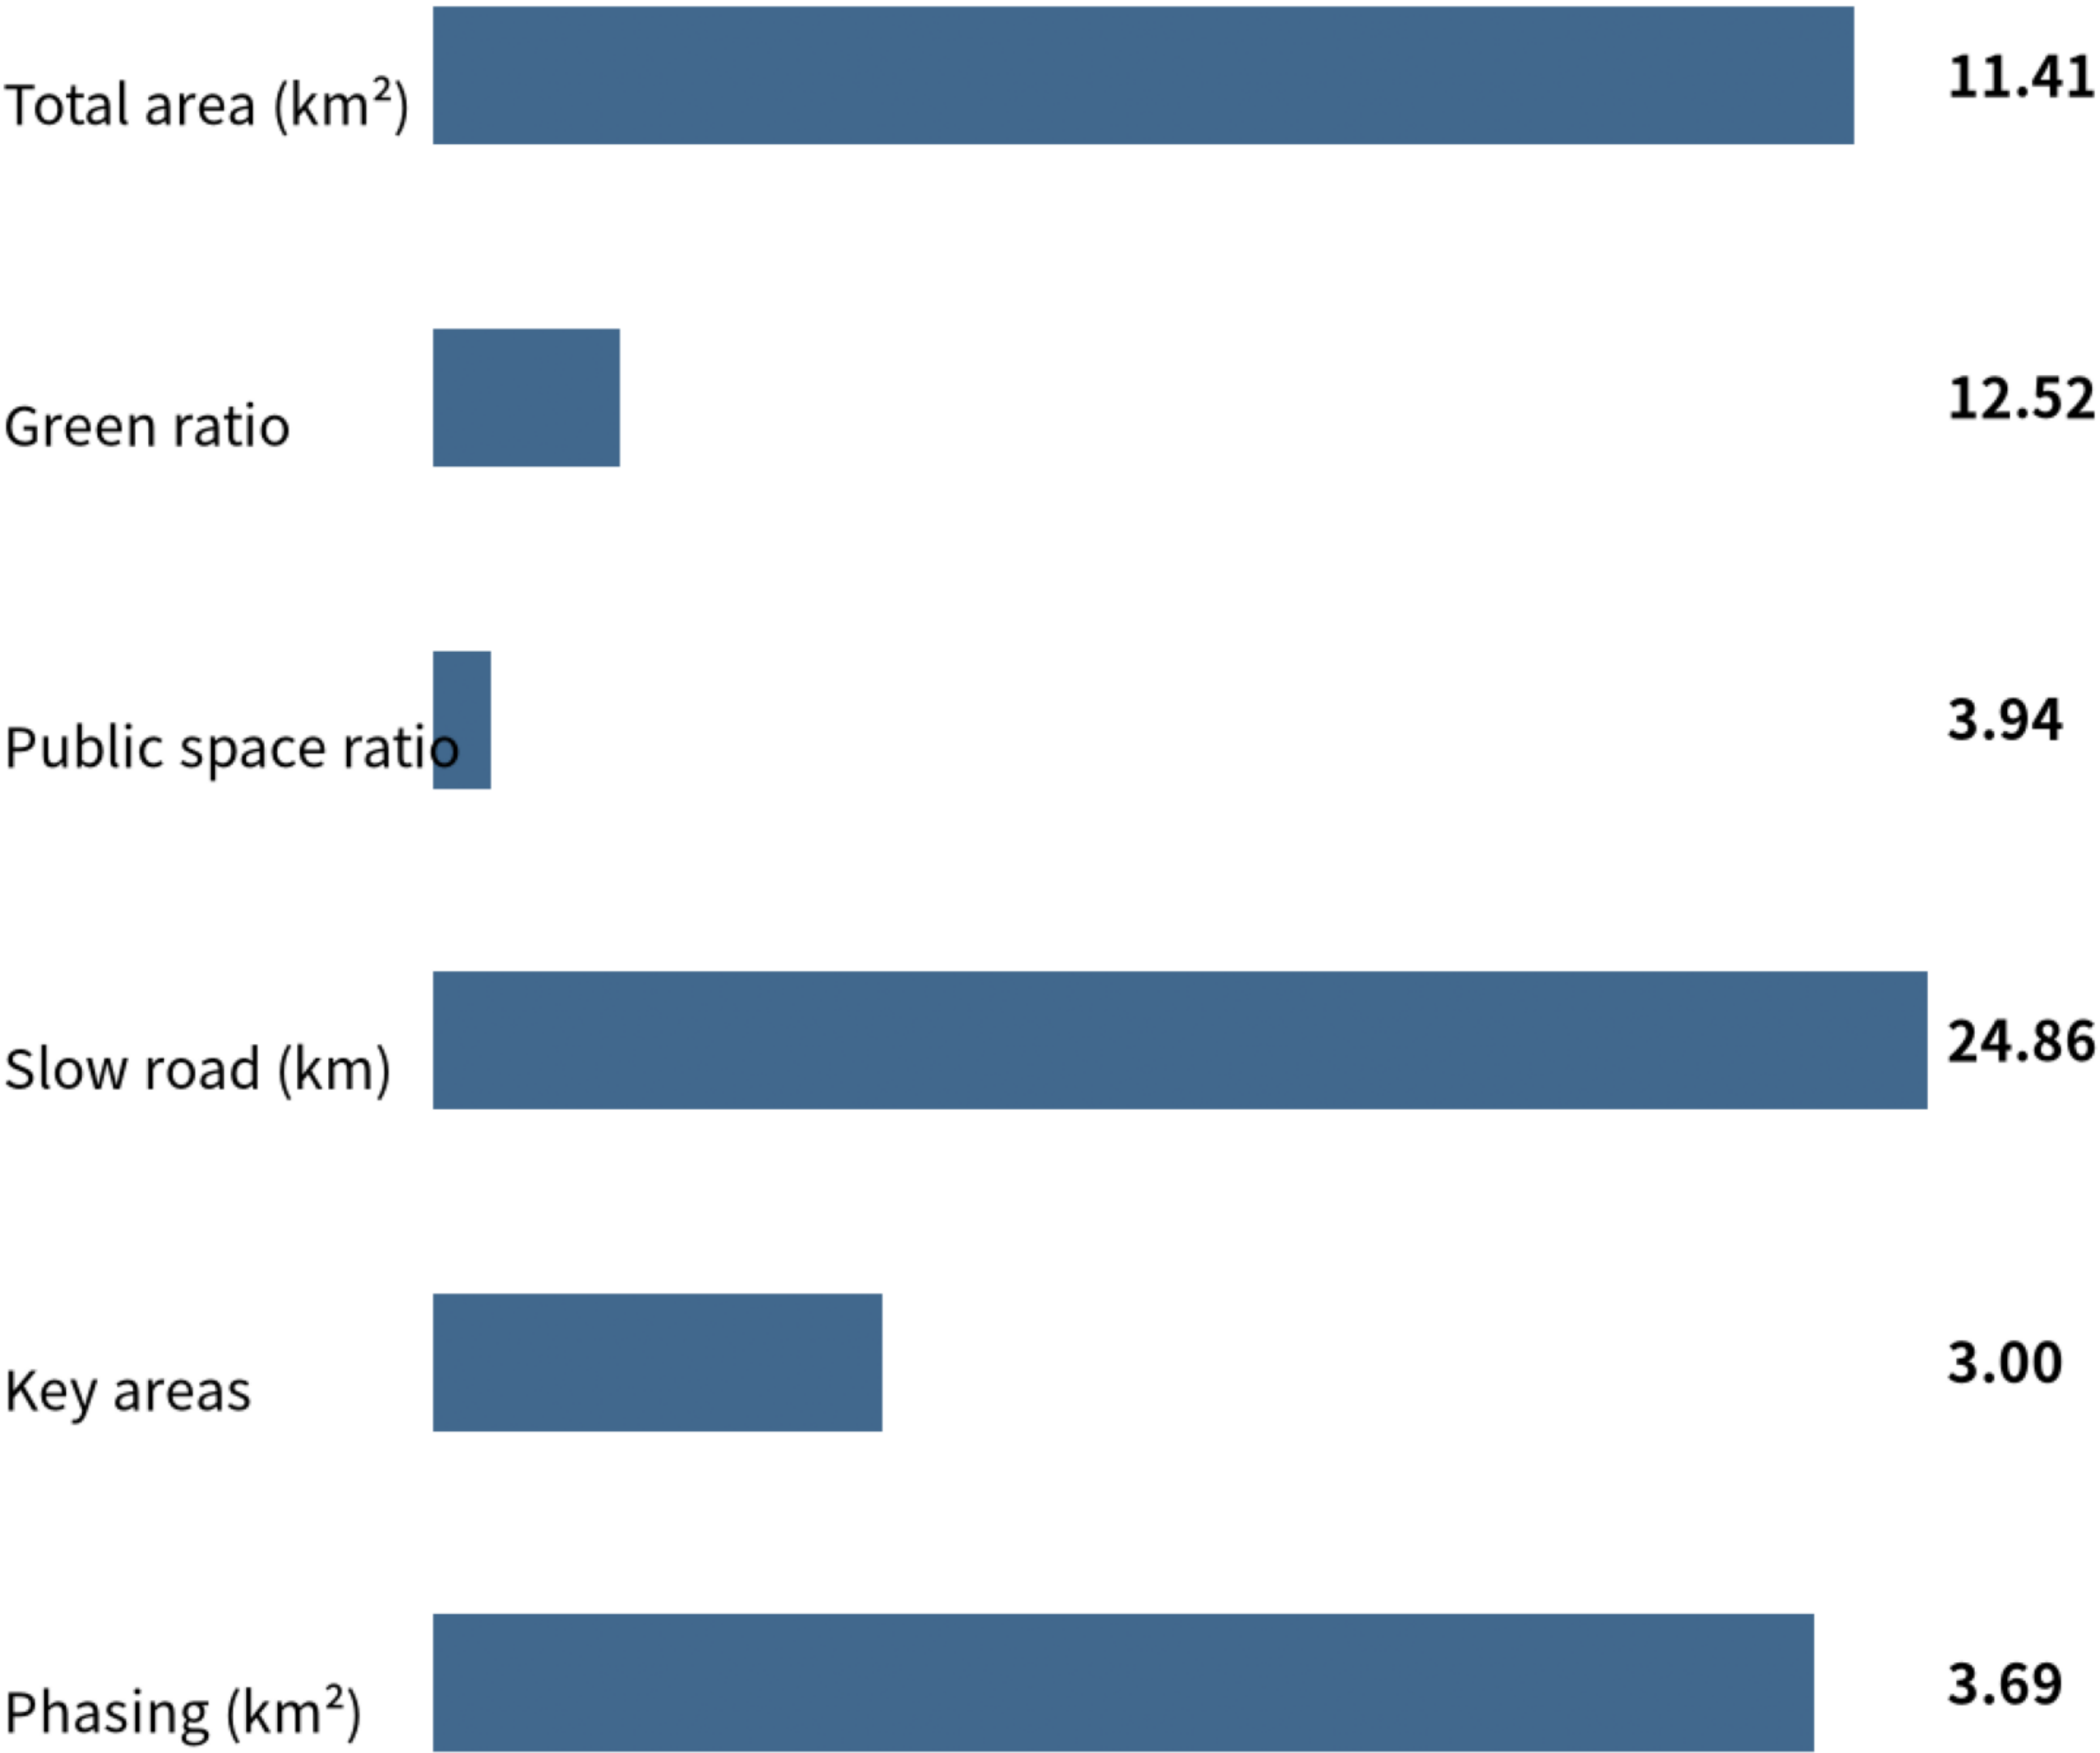

Metrics Evidence Chain & Phasing MICROLOOP

Phasing (three-loop order)

Provisional overall-design boundary

Core Metrics • Task Coverage

Coverage: 3 positioning / 5 functions / 6 tasks / 24 end-scenario cards / 5 personas / 3 hub landmarks / 3 phases (agent.1–6 fully covered)
