

One Consist • Three Cars • Two Wings • Six Couplers

Overall structure diagram

Land-use structure & three-car functional layout

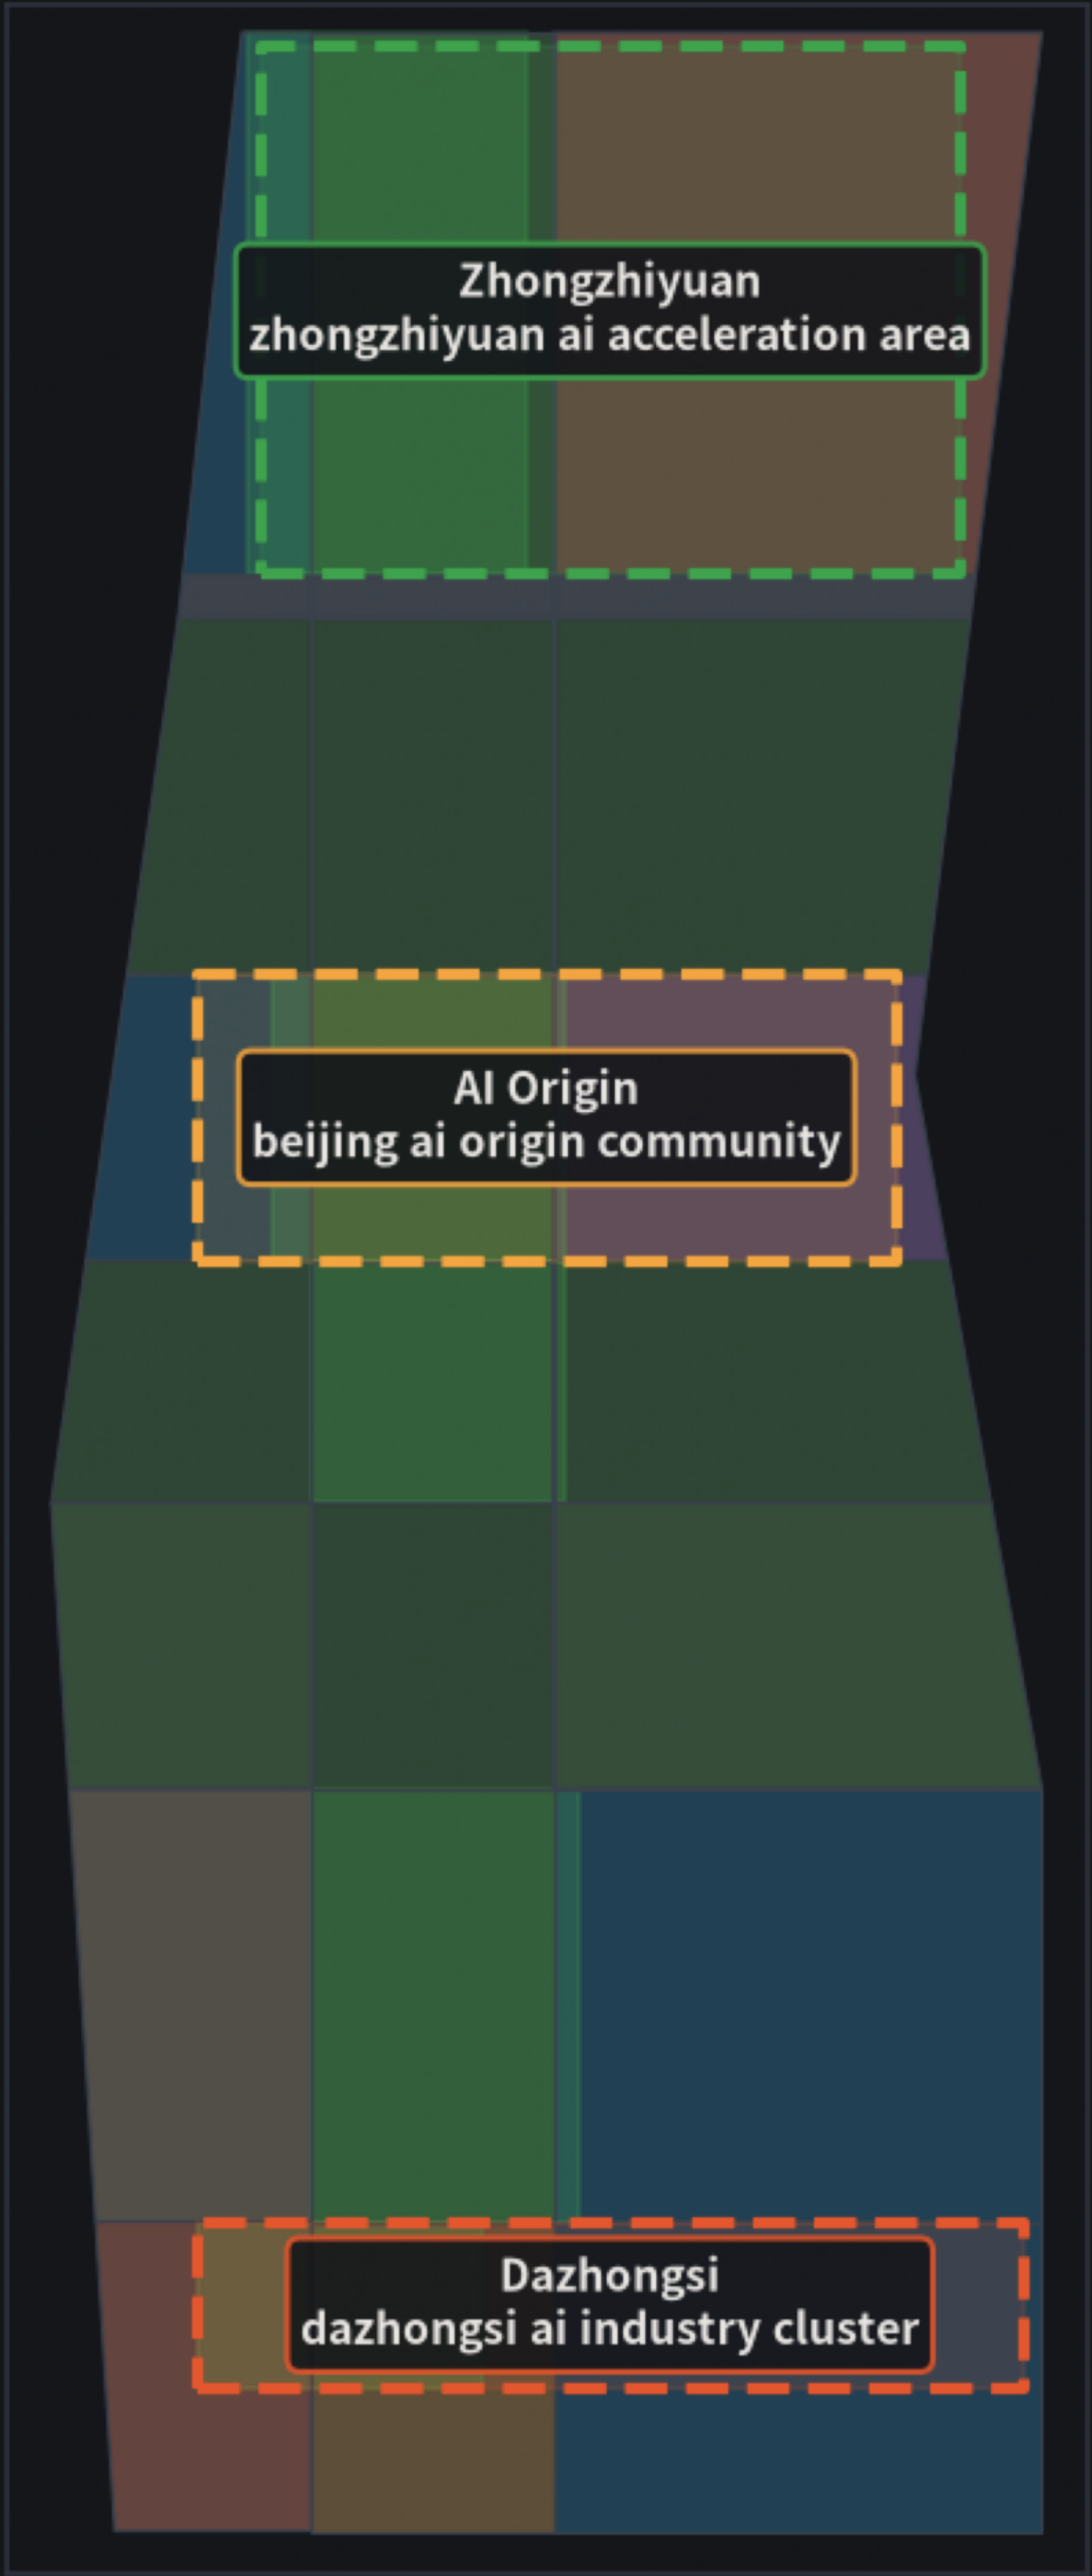

24 conceptual units, full coverage of provisional scope (EPSG:4548)

green ratio 0.21 • public space ratio 0.06 • units 24

Three key areas: detailed design index

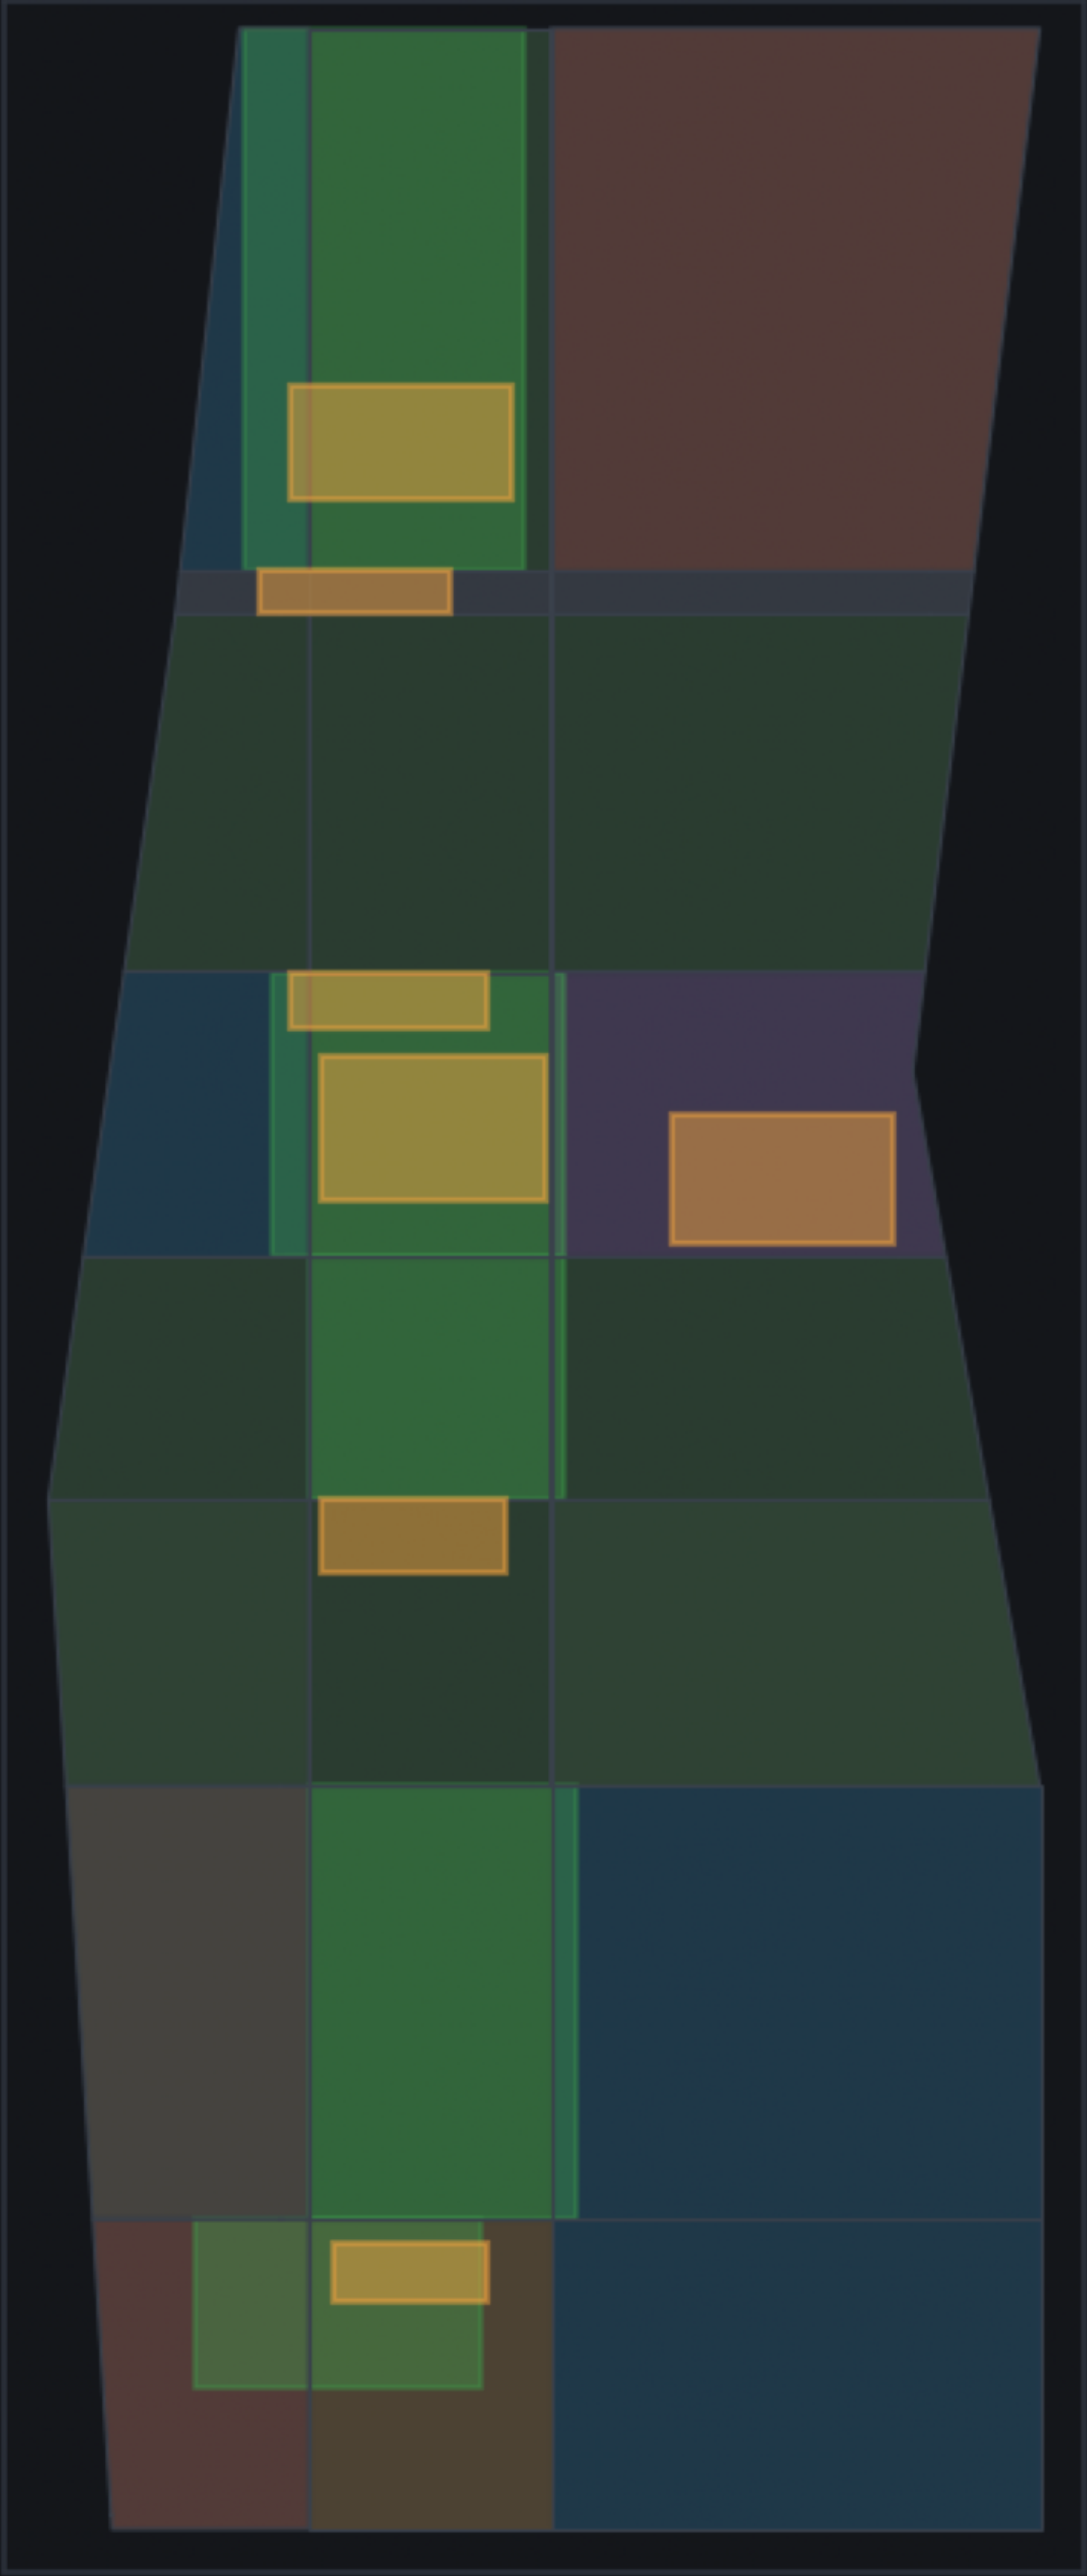

Zhongzhiyuan=locomotive • AI Origin=head car • Dazhongsi=freight/passenger car (provisional)

Key areas total 3692893.03 m² (approx.) • cards 12 • personas 5

Mobility, slow traffic & blue-green public system

Main-line slow spine + six seams + blue-green network + node plazas

Greenway 19446 m • stitching corridors 11006.8 m • public space 663865.78 m²

Core metrics recalculation & evidence chain

All area/ratio metrics recomputed from geometry in EPSG:4548; field metrics await licensed baselines

总体范围面积 Scope area	11412842.258 m ²
_____ polygon area(submitted provisional site boundary)	
概念绿地率 Green ratio	0.2107
_____ green space area sqm / site area sqm	
公共空间比例 Public space ratio	0.0582
_____ public space area sqm / site area sqm	
正线绿道 Main-line greenway	19446 m
_____ sum(linestring length(roads where road class=greenway))	
连挂钩位 Coupler nodes	6 处/nodes
_____ count(public space features with space type=coupler node plaza)	
场景卡 Scenario cards	12 张/cards
_____ count(scenario cards in proposal AI-scenario chapter)	
产业测试验证场景 Industry tests	4 张/cards
_____ count(scenario cards typed as industry test/validation)	
用户画像 Personas	5 类/classes
_____ count(user persona classes in proposal)	
生态案例 Ecosystem cases	7 个/cases
_____ count(global AI ecosystem cases summarised)	
朝圣地标 Pilgrimage landmarks	4 处/sites
_____ count(AI pilgrimage landmarks / honour nodes)	
更新项目包 Renewal packages	10 个/packages
_____ count(renewal project packages)	
实施分期 Phasing stages	3 期/stages
_____ count(phasing features)	
→ Every known metric carries status/value/unit/formula/confidence/assumptions; unknown metrics (FAR, height, statutory green ratio, demolition, live success rate) stay null with reasons.
