

CivicMind Jing-Zhang | Governance as Infrastructure

Rules, public review and trusted services form one accountable loop

Xiaoyue River testing wing

Low-risk, reversible community tests

Zhongguancun service wing

Turn validated methods into standards, tools and talent

02 / One body, two wings, three layers · Governance loop

The Jing-Zhang heritage governance spine coordinates three functional layers; two wings connect real-world testing and professional service export.

Three Key Areas | Three Civic Experiences

Each area pairs a public action, spatial toolkit and safeguard

A1 Governance Loop

SEE HOW RULES ARE MADE

Knowledge gallery • simulation room

Compliance test court

Safeguard: models never replace statutory duty

A2 Sensing Eye

CHALLENGE AND REACH A PERSON

Public review hall • accessible navigation

Co-design court

Safeguard: no face or route collection

A3 Trust Bridge

UNDERSTAND PERMITTED DATA USE

Trusted exchange • scenario hall

Legal-service referral

Safeguard: key decisions stay human-led

04/ Six users · Six real service journeys

Personas test whether urban-agent services remain equal, legible and transferable to a responsible human under different needs and risks.

05/ 11 AI + governance scenarios

A shared service chain: Discover → Assess → Test → Review → Update. Every scenario defines data boundaries, Human Review and exit conditions.

06 /

Urban-agent supervision & Human Review dashboard

A single conceptual entry point for operating status, risk, public challenge and accountable human judgement. It does not issue administrative conclusions.

Illustrative values show information architecture only, they are not live operating data or evidence of government deployment.

07 / Blue-green public space & governance-service network

Walking routes, ecological corridors, heritage spaces and service nodes create a civic interface that is reachable, understandable and able to provide human help.

A reachable, stoppable and assisted public-service chain

From place to service

Spine: Jing-Zhang culture, slow mobility and governance literacy.

Nodes: Public review, accessible guidance and staffed service.

Continuous walking

Walking, cycling and transit information connect the heritage spine.

Accessible service chain

Voice, large text, tactile routes, low counters and visible human help.

Minimum sensing

Collect only the least data necessary for an authorised public purpose; high-risk alerts require review and logging.

CIVICMIND JING-ZHANG | CONFIRMED VISUAL IDENTITY V1

AI governance infrastructure for a legible, accountable city

CORE MARK

Dual paths: public rules and real-world coordination

Loop: sense • assess • review • respond • update

Gold node: accountable human sign-off

STANDARD COLOURS

TRUSTED NAVY

CIVICMIND

JING-ZHANG

USE PRINCIPLES

- Prioritise covers, boards, dashboards and scenario navigation
- Preserve clear space around the mark
- Use the symbol alone only at small sizes
- Do not stretch, rotate, recolour or add glow effects

CONFIRMED V1

From Concept to Delivery | Three Evidence Gates

Public value and spatial logic lead; technical evidence supports the decision

01 SPATIAL BASIS

Label provisional limits
Keep topology complete
Recalculate with official data

02 ACCOUNTABILITY

Name users and owners
Set data limits and review
Define exit conditions

03 DELIVERY GATE

Start with reversible pilots
Scale after value and safety tests
Stop or exit if tests fail

VERIFIABLE NOW

3 key areas · 11 scenarios · 6 personas · 3 landmarks

REQUIRES PROFESSIONAL INPUT

FAR, height, density, statutory green ratio, setbacks, ownership and utilities
