

Jing-Zhang AI: People, City, Shared Endeavor

A traceable spatial framework linking railway memory, open innovation, and everyday public life.

Jing-Zhang AI: People, City, Shared Endeavor

A readable civic spine linking railway memory, open innovation, and everyday public life.

Three spatial chapters

Number, colour, and position match the map; they do not denote land use.

01 Railway memory

North: make the railway memory legible as a time sequence.

02 Open innovation

Middle: put release, testing, and learning on an accessible public interface.

03 Public life

South: let community service and industrial renewal support daily use.

Spatial objects

- Key-area number
01 / 02 / 03
- Civic public-life spine
- - - Provisional constraint
- Context morphology (OSM)

Three-level land structure: turn mixed use into a walkable public interface

Four colours mean proposed land use only; areas, spine, and boundary use separate marks.

Four proposed land-use types

The four colours carry land-use meaning on this board only.

AI research / innovation	23.4%
Park and open space	22.7%
Industry and commercial service	29.5%
Community service and support	24.4%

Three design rules

R1/R2/R3 are spatial anchors on the map.

R1	Mix the dominant uses A shared ground-floor interface between LU-001 and LU-003.
R2	Short and optional routes Make the civic spine a choice of traversable connections, not one gate.
R3	Active edges, incremental renewal Start with nodes and active edges, then phase by project conditions.

Three key areas: three spatial tasks on one civic spine

Colours index places only; each area gets a spatial move and a public-life role.

Key-area tasks

Map numbers match the side bars; they do not denote land-use classes.

- 01 Zhongzhiyuan AI acceleration area**
North · testing and open release
Turn railway traces into accessible AI demonstration, release, and learning nodes.

- 02 Beijing AI Origin Community**
Middle · community life and shared service
Use the public interface for daily life, talent services, and cross-organisation work.

- 03 Dazhongsi AI industry cluster**
South · renewal and memory
Connect industry service, community support, and Jing-Zhang memory through incremental renewal.

Reading key

- Colour = place index

Slow mobility and blue-green screen: connect people before AI

Spine, staying interface, and green space are different spatial objects; AI comes last.

One spatial system

Three graphic marks, three meanings; data conditions are not drawn as facilities.

Slow-mobility and civic spine
Continuous line: link walking, cycling, civic service, and railway memory.

Public-life staying interface
Translucent surface: an accessible edge for staying and observation.

Continuous park green
Green surface: shade, staying, and ecological service; distinct from the spine.

Sequence

01 Make it walkable → 02 Then make it stay → 03 Add AI last

Three people-first tests: from spatial moves to use decisions

J / N / G are not detached slogans: they land on the land-use edge, mobility spine, and public-life nodes.

Design quantities

Only quantities recalculable from the submitted geometry are shown.

Overall design area	11,412,825 m ²
Designed green ratio	12.3%
Public-space ratio	7.3%
Key-area count	3

Spatial anchors for the three tests

J / N / G on the map point to the cards, figure numbers, and spatial moves below.

Jacobs · everyday diversity

R1 / Fig. 02

Mixed dominant uses meet at a shared active edge and support different time periods.

Newman · low-car access

A / Fig. 04

Make the slow-mobility and civic spine continuous before adding an AI interface.

Gehl · public life

01-03 / Fig. 03

Each key area gets public-life nodes that can be observed and adjusted.
