

## JING-ZHANG CIVIC LOOP

# An AI innovation belt for everyday civic services

Continuous passage, staffed help, no-account alternatives, exit and appeal come before explainable AI.

Concept experience image; not a photograph, exact site view, approved plan or completed construction.

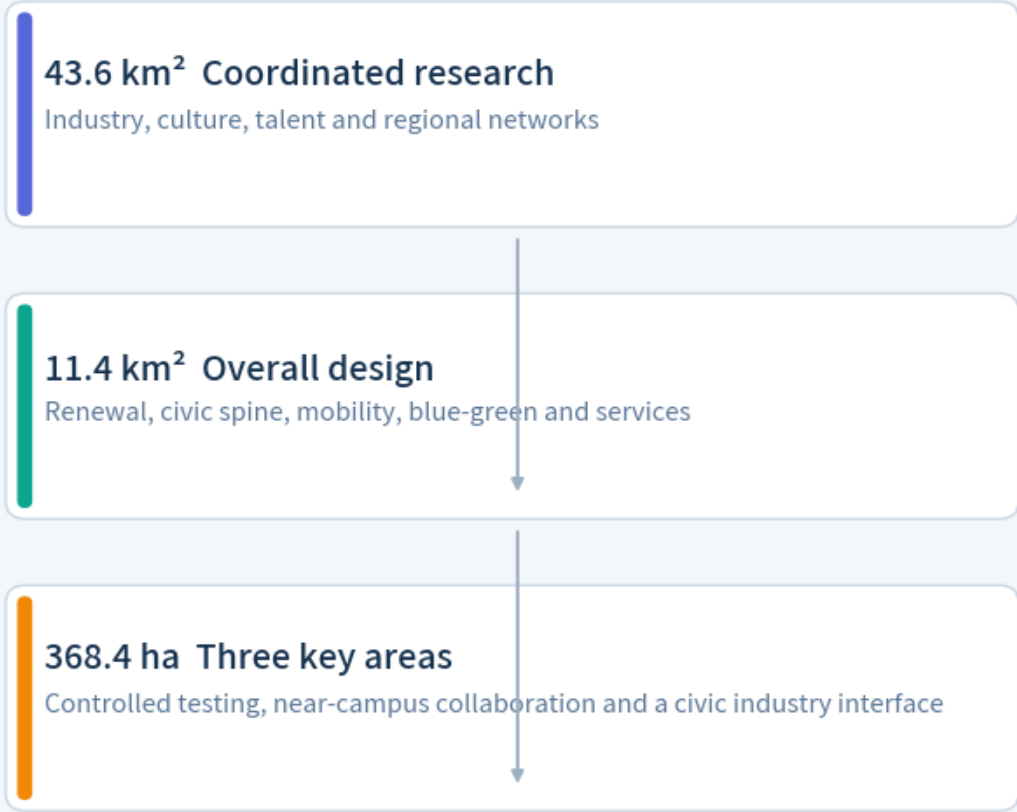

# Three scope levels and spatial evidence

One coordinate system for provisional extents, three nodes and public urban fabric

JING-ZHANG CIVIC LOOP

## Three scope levels on one spatial evidence map

Public urban fabric is context only; provisional extents stay dashed and the three nodes keep their relative positions

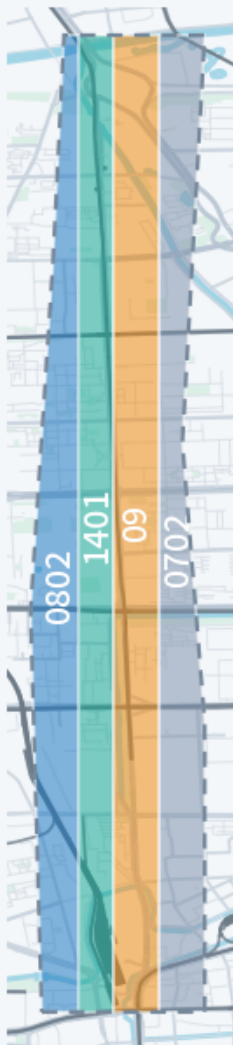

# Land-use classes and mixed services

Code 09 is corrected; industry support remains a conceptual programme mix

## JING-ZHANG CIVIC LOOP

# Correct land-use classes before mixed civic services

Codes follow the national classification; programme mix is a design note, not statutory control

### 0802 Research land

AI R&D and open collaboration; parcel and control confirmation pending

### 1401 Park green space

Continuous walking, shade, rest and accessible service

### 09 Commercial and service land

Industry support is a programme note; code 05 (wetland) is no longer misused

### 0702 Community-service support

Staffed help, daily life and non-AI access

# Continuous passage and blue-green public space

Six walking audits, paper signs, staffed help and optional AI in parallel

## JING-ZHANG CIVIC LOOP

# Repair continuous passage before adding withdrawable AI

Six walking audits are mapped; paper wayfinding and staffed help remain parallel

### ① Signs

The route works without a device

### ② Staffed help

Complex cases can be referred

### ③ Optional AI

State purpose, data and confidence

### ④ Appeal and exit

Stop, correct and delete the session

# Operating contracts for three key areas

Ordinary paths, AI increments, entry gates and stop conditions differ

JING-ZHANG CIVIC LOOP

## Three key areas, three distinct operating contracts

Each area states the ordinary path, AI increment, entry gate and stop condition

**Zhongzhiyuan • T2 controlled sandbox**

Ordinary: staffed benchmark and offline equipment notes  
AI: edge-model, energy and recovery comparison  
Gate/stop: isolated plan and authority; stop on boundary breach or failed recovery

**AI Origin Community • T1 civic service**

Ordinary: paper signs, staffed desk and no-account access  
AI: explainable guidance and service triage  
Gate/stop: accessibility and privacy review; stop if any group is blocked

**Dazhongsi • T3 rights-cleared display**

Ordinary: staffed rights check and in-person explanation  
AI: synthetic-data permission, withdrawal and audit demo  
Gate/stop: item-level clearance; stop if withdrawal or audit fails

# Three validation tests: baseline before AI

Results only decide whether another review cycle is worthwhile

T1 AI Origin Community

Paper signs and staff run first; AI only explains and triages. Stop if any group is blocked, collection exceeds notice or appeal fails.

T3 Dazhongsi

Staffed rights checks run first; synthetic data only demonstrates permission, withdrawal and audit. Remove on failed withdrawal.

T2 Zhongzhiyuan

Staffed benchmarks and offline notes run first; isolated tests compare edge models, energy and recovery. Disconnect on breach or failed recovery.

Shared exit grammar

Baseline first -> bounded entry -> human watch -> stop on failure -> retain, revise or retire.

# Ten scenario cards, each with an ordinary path

Scenarios are neither slogans nor deployed services

1. Open-source release hall

Code, model notes and failure reviews; no identity trail.

2. Trustworthy test sandbox

Protocol, red-team result and pause condition; no production link.

3. Edge-compute station

Low-risk local inference; ordinary service remains offline.

4. AI slow-mobility guide

Multilingual advice; paper maps and staffed directions remain.

5. Heritage oral-history workshop

Authorised stories; synthetic voice is not archival audio.

6. Qinghe low-carbon corridor

Explain water, shade, cycling and energy; invent no performance.

7. Research-transfer station

Connect universities and professional help; promise no finance or patent.

8. Data-governance living room

Show permission and audit; no personal sensitive data.

9. Community-service sample street

Staffed, no-account and no mandatory QR code.

10. Global AI civic route

Connect three nodes; dates and participants remain pending.

# Culture, landmarks and public access

Railway self-reliance + Zhongguancun open innovation + accountable AI

First Railway

Movable, low-impact memory route; no new structure or excavation before heritage GIS.

Return to Origin

A walkable loop linking three nodes, blue-green space and civic programmes.

Collective Correction

Authorised open-source contributions, failure reviews and staffed explanation.

Five users

Developers, start-ups, residents, university communities, firms and international visitors; profiles are not population findings.

# Renewal work packages and phase gates

Publish first, test second, deepen last; every phase can exit

P0 Evidence and authority

No field entry before boundaries, title, heritage, mobility, utilities and responsibility are resolved.

P2 Controlled validation

Run T1-T3 only after professional and rights-holder approval, with pause, appeal and incident review.

P1 Lightweight experience

Paper signs, staffed help, reversible exhibits and open discussion.

P3 Deepen or retire

Retire functions without evidence of public value and preserve open learning.

# Metrics, evidence and four-gate review

Facts, provisional geometry, design and stopping conditions remain separate

## JING-ZHANG CIVIC LOOP

# A metric advances only when its evidence chain closes

Facts, provisional geometry, design and stop conditions stay separate; four gates review the claim

11,412,825 m<sup>2</sup>

Provisional geometry area

12.34%

Provisional green ratio

7.33%

Provisional public-space ratio

FAR / height

Pending official data

Retain / revise / retire; presentation never substitutes for evidence

Concept proposal • provisional geometry • not a statutory plan or implementation approval

# Risk, rights and next steps

Official data triggers coordinated replacement of geometry, metrics, figures, PDFs, HTML and hashes

## Known facts

Call tasks, district statistics, Phase I park, existing service and standards keep their stated use limits.

## Provisional and pending

Official boundaries, parcels, title, controls, roads, utilities, fire, heritage GIS and operating responsibility.

## Rights and data

OSM ODbL attribution; official pages are paraphrased; no portraits, marks, private maps or personal data.

## Submission state

Review-ready means package structure is reviewable, not professional approval, service launch or construction authority.
