

Scope (official figures govern)

Coordinated research: ~43.6 km²

Overall design: ~11.4 km²

Key areas: ~368.4 ha

Package provisional recompute ~11.4 km², consistent

Three nodes & four flows

Hub: city-level smart-compute cluster

Edge: community-level edge compute

Synergy Park: green power & waste heat demo

Four-flow loops: compute / green power / waste heat / data

Core metrics (rounded)

site_area_sqm ≈ 11.4 km² (provisional)

green_ratio ≈ 12.2%

public_space_ratio ≈ 0.4%

Exact machine values in metrics.json; recompute when official data is published

Three-node pilot implementation & long-term operation matrix (concept)

Threshold frameworks and responsibilities only; no fabricated power, heat, capacity, investment or approval data

Dimension	Hub	Edge	Synergy Park
Minimum pilot	Pool test partition + voucher desk	One corner unit + demo window	Heat-interface well + board
Preconditions	Green-power & metering plan, sandbox rules	Community council consent; noise/heat plan	Temperature-level & grid-connection study
Responsible actors	Haidian compute authority (proposed) + operator (open selection)	Sub-district center + volunteers	Heating owner + responsible energy operator
Interfaces	Grid utility local office, universities	Sub-district, schools, startups	Grid, heating owner, operators
Stage gates	Written milestone review per stage	Expand after trial & feedback review	Expand after first metering disclosure
KPI framework	Queue wait, utilization, review pass rate	Scenario usage, feedback closure	Metering accuracy, timeliness, adoption

Long-term operation

Governance: co-construction committee + annual council; annual budget categories only (operations/renovation/disclosure/community/emergency); maintenance: contracts + replace-when-damaged; developer path: voucher→pool→sandbox→test scenario→landing; continuous KPIs: disclosure timeliness, feedback closure, accessibility human-review compliance.

Scenario opening & attraction (concept chain): voucher application → pool trial & sandbox validation → test-period pass (exit framework) → incubation & landing → annual carbon disclosure review; no company lists or landing volumes promised; residents join annual reviews via councils and feedback channels.

Brand identity • AI+ scenario cards • cultural narrative (concept)

VI and scenario cards are original concepts of this package

green power/heat)

ds to wayfinding and board corners

lculation becomes a visible city cycle.'

Ten AI+ scenario cards (AI-assisted + human review)

SC-01 Compute scheduling AI	SC-02 Energy optimization AI
SC-03 Matching AI	SC-04 Data sandbox AI
SC-05 Carbon tracking AI	SC-06 Slow-path guidance AI
SC-07 Public-space guide AI	SC-08 Accessible guide AI
SC-09 Developer support AI	SC-10 Disclosure Q&A AI

Three industry test scenarios (object/data input/metrics/exit): ①scheduling simulation ②energy optimization + heat metering joint test ③sandbox joint-computing test; thresholds preset in writing by the pilot task force; below-floor metrics pause/stop the trial.
