

YOUR TURN JING-ZHANG

Turning human-AI turn-taking into civic space

ONE SPINE / THREE ROUNDS / TWO WINGS / SIX YIELD COURTS / TWELVE TURNS

AI does not interrupt. The city yields first. Everyone gets a next turn.

Package

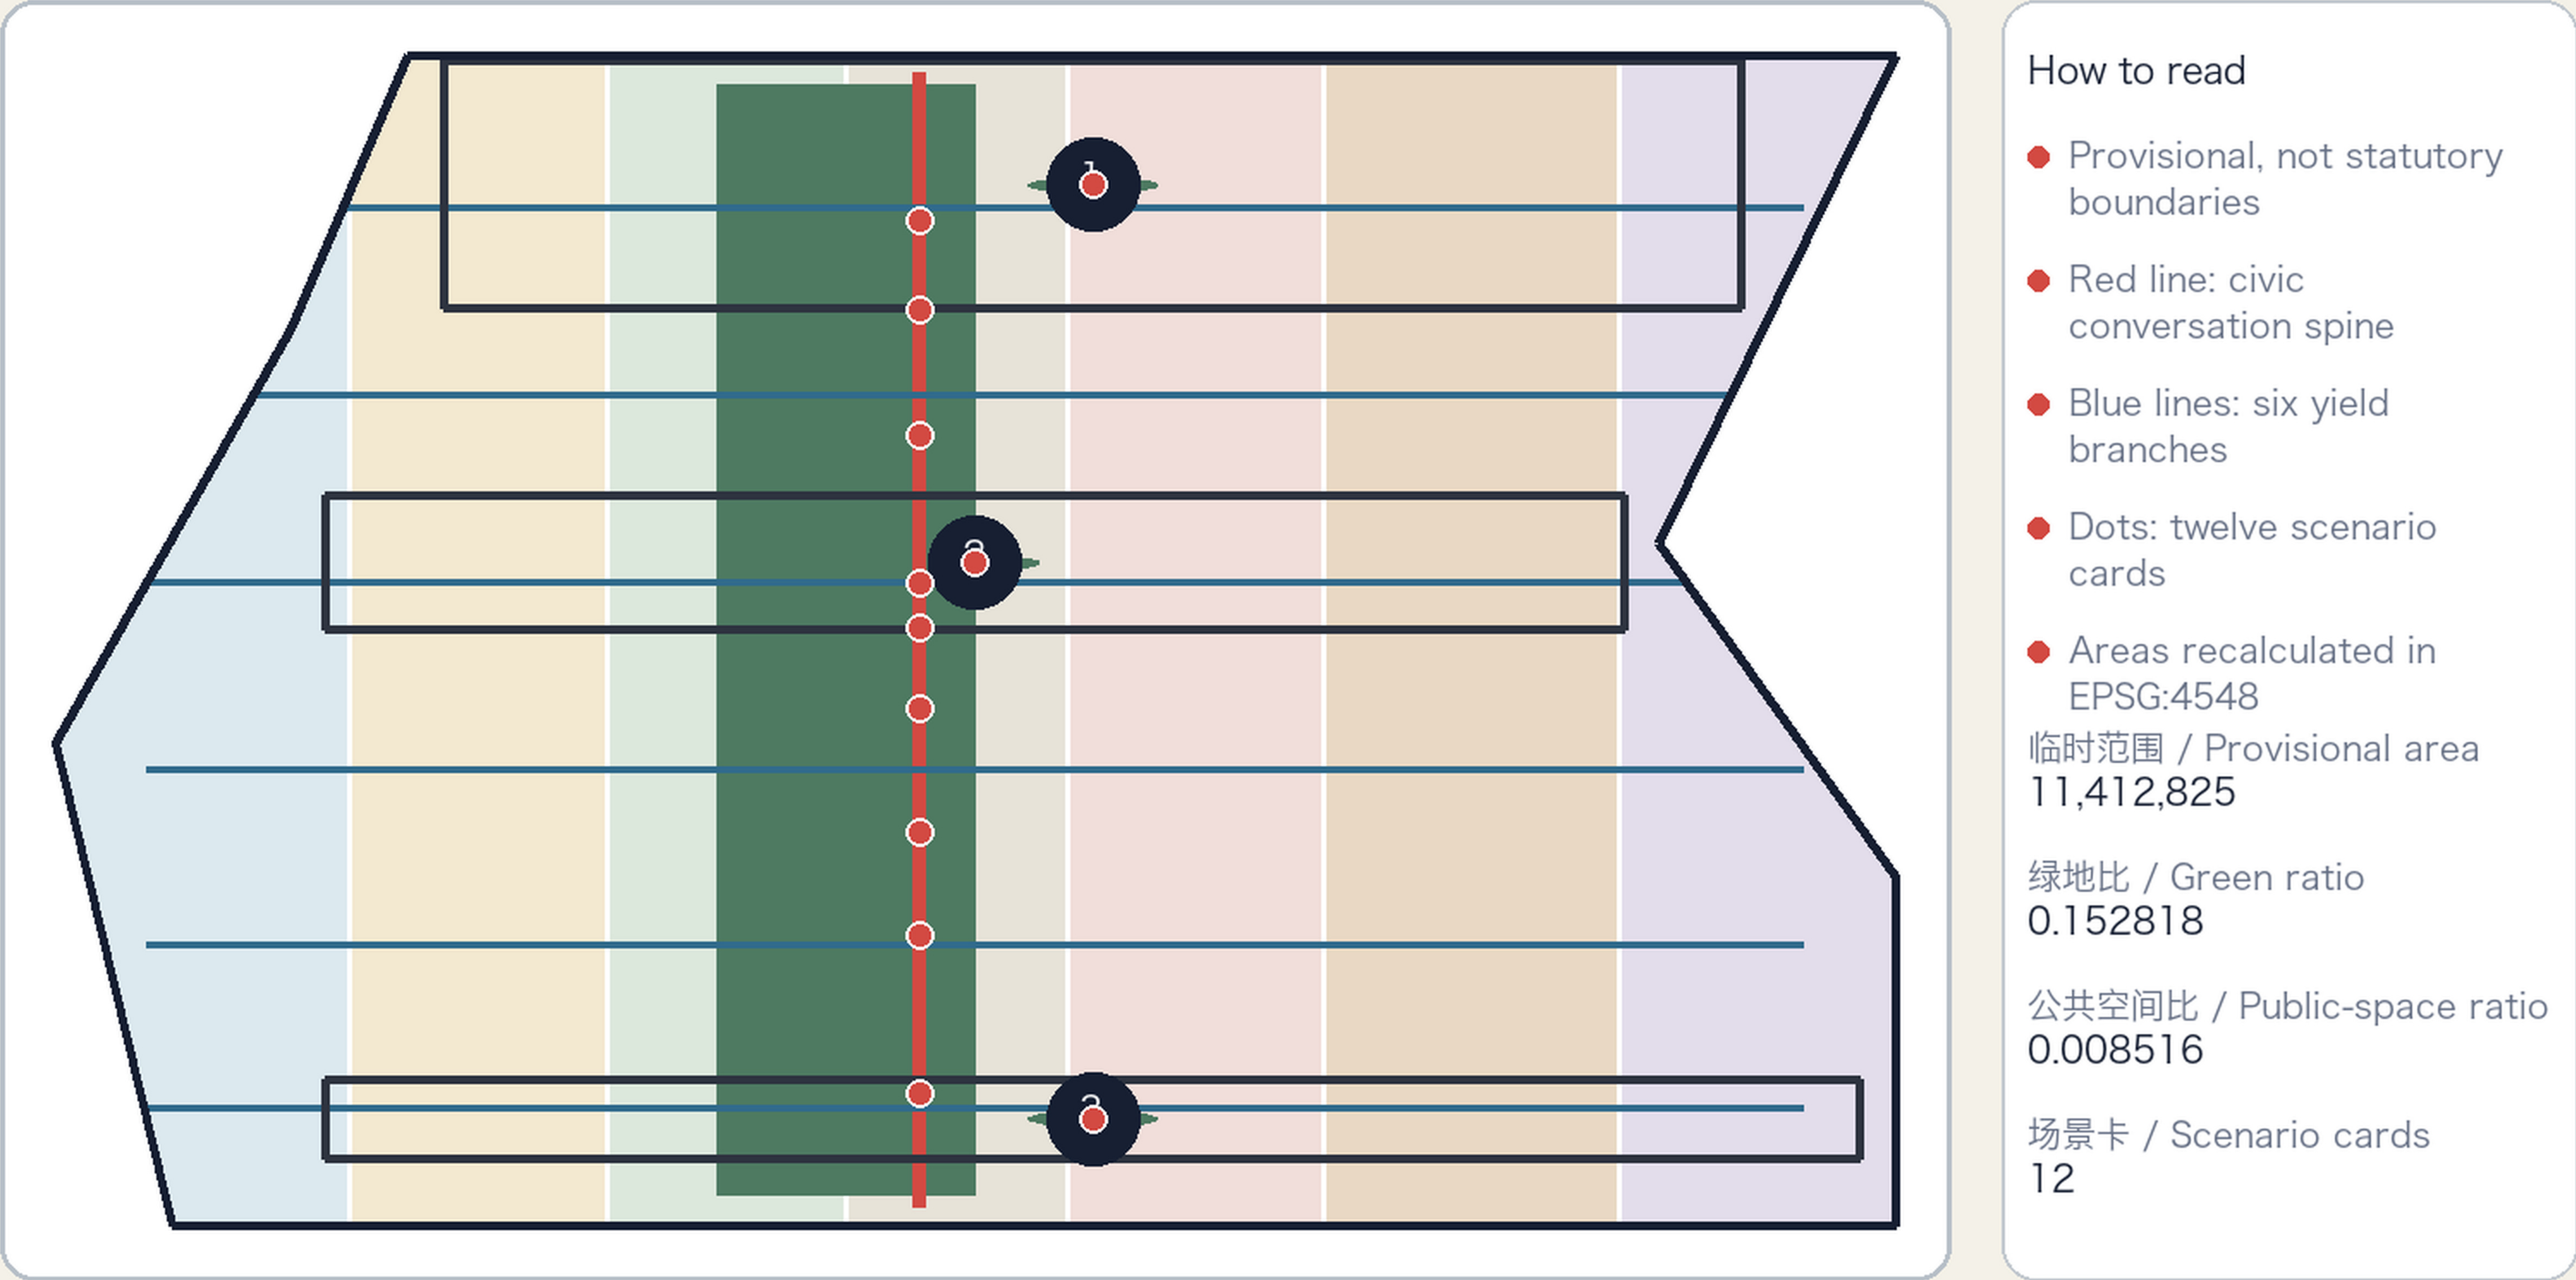

- Bilingual narrative, five figures, and offline HTML
- 9 GeoJSON layers, metrics, and three matrices
- 12 scenario cards, 9 work packages, and 3 phases
- A3 booklet, A0 boards, sources, and assumptions

Review boundary

- Provisional geometry supports concept comparison and internal recalculation only
- FAR, height, BCR, demolition, and operating performance remain pending
- High-impact AI retains on-site stop, human takeover, opt-out, and review
- Spatial actions support professional development, not approval commitments

Provisional site, three key areas, and turn-taking structure

AI does not interrupt. The city yields first. Everyone gets a next turn.

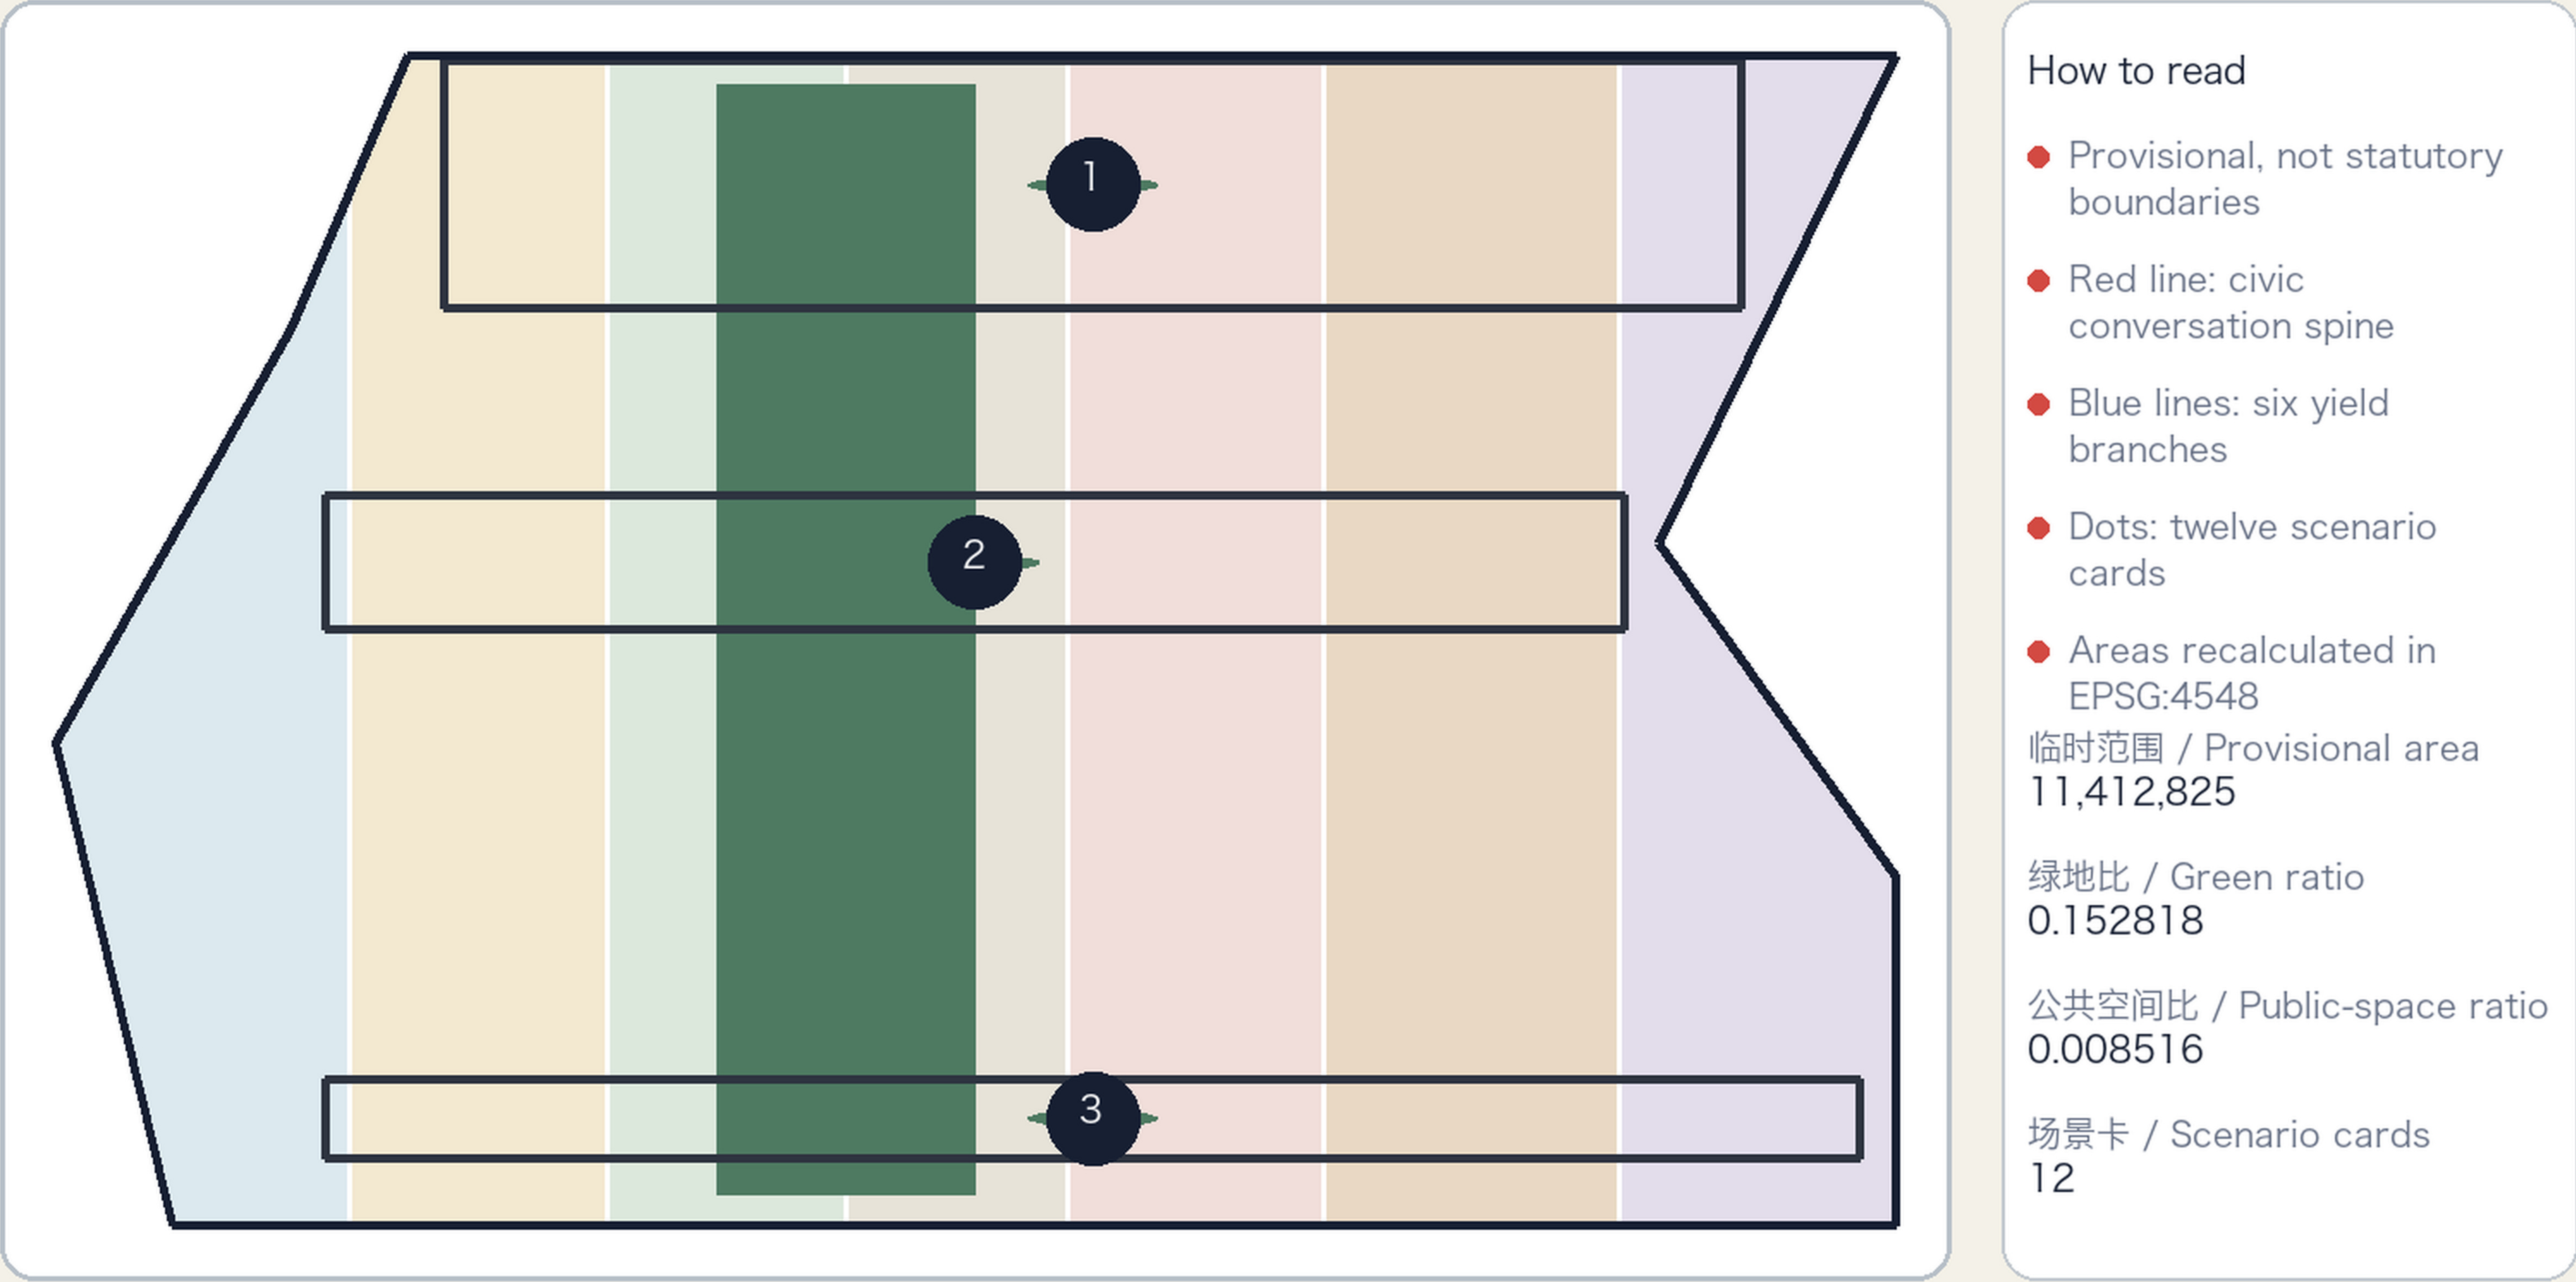

Derived from the same GeoJSON and metrics.json.

One spine, three rounds, two wings, six yield points, and twelve turns. The civic conversation spine connects validation, co-creation, and urban exchange while every high-impact scenario retains human priority, pause, and takeover.

Seven land-use interfaces and one civic conversation spine

AI does not interrupt. The city yields first. Everyone gets a next turn.

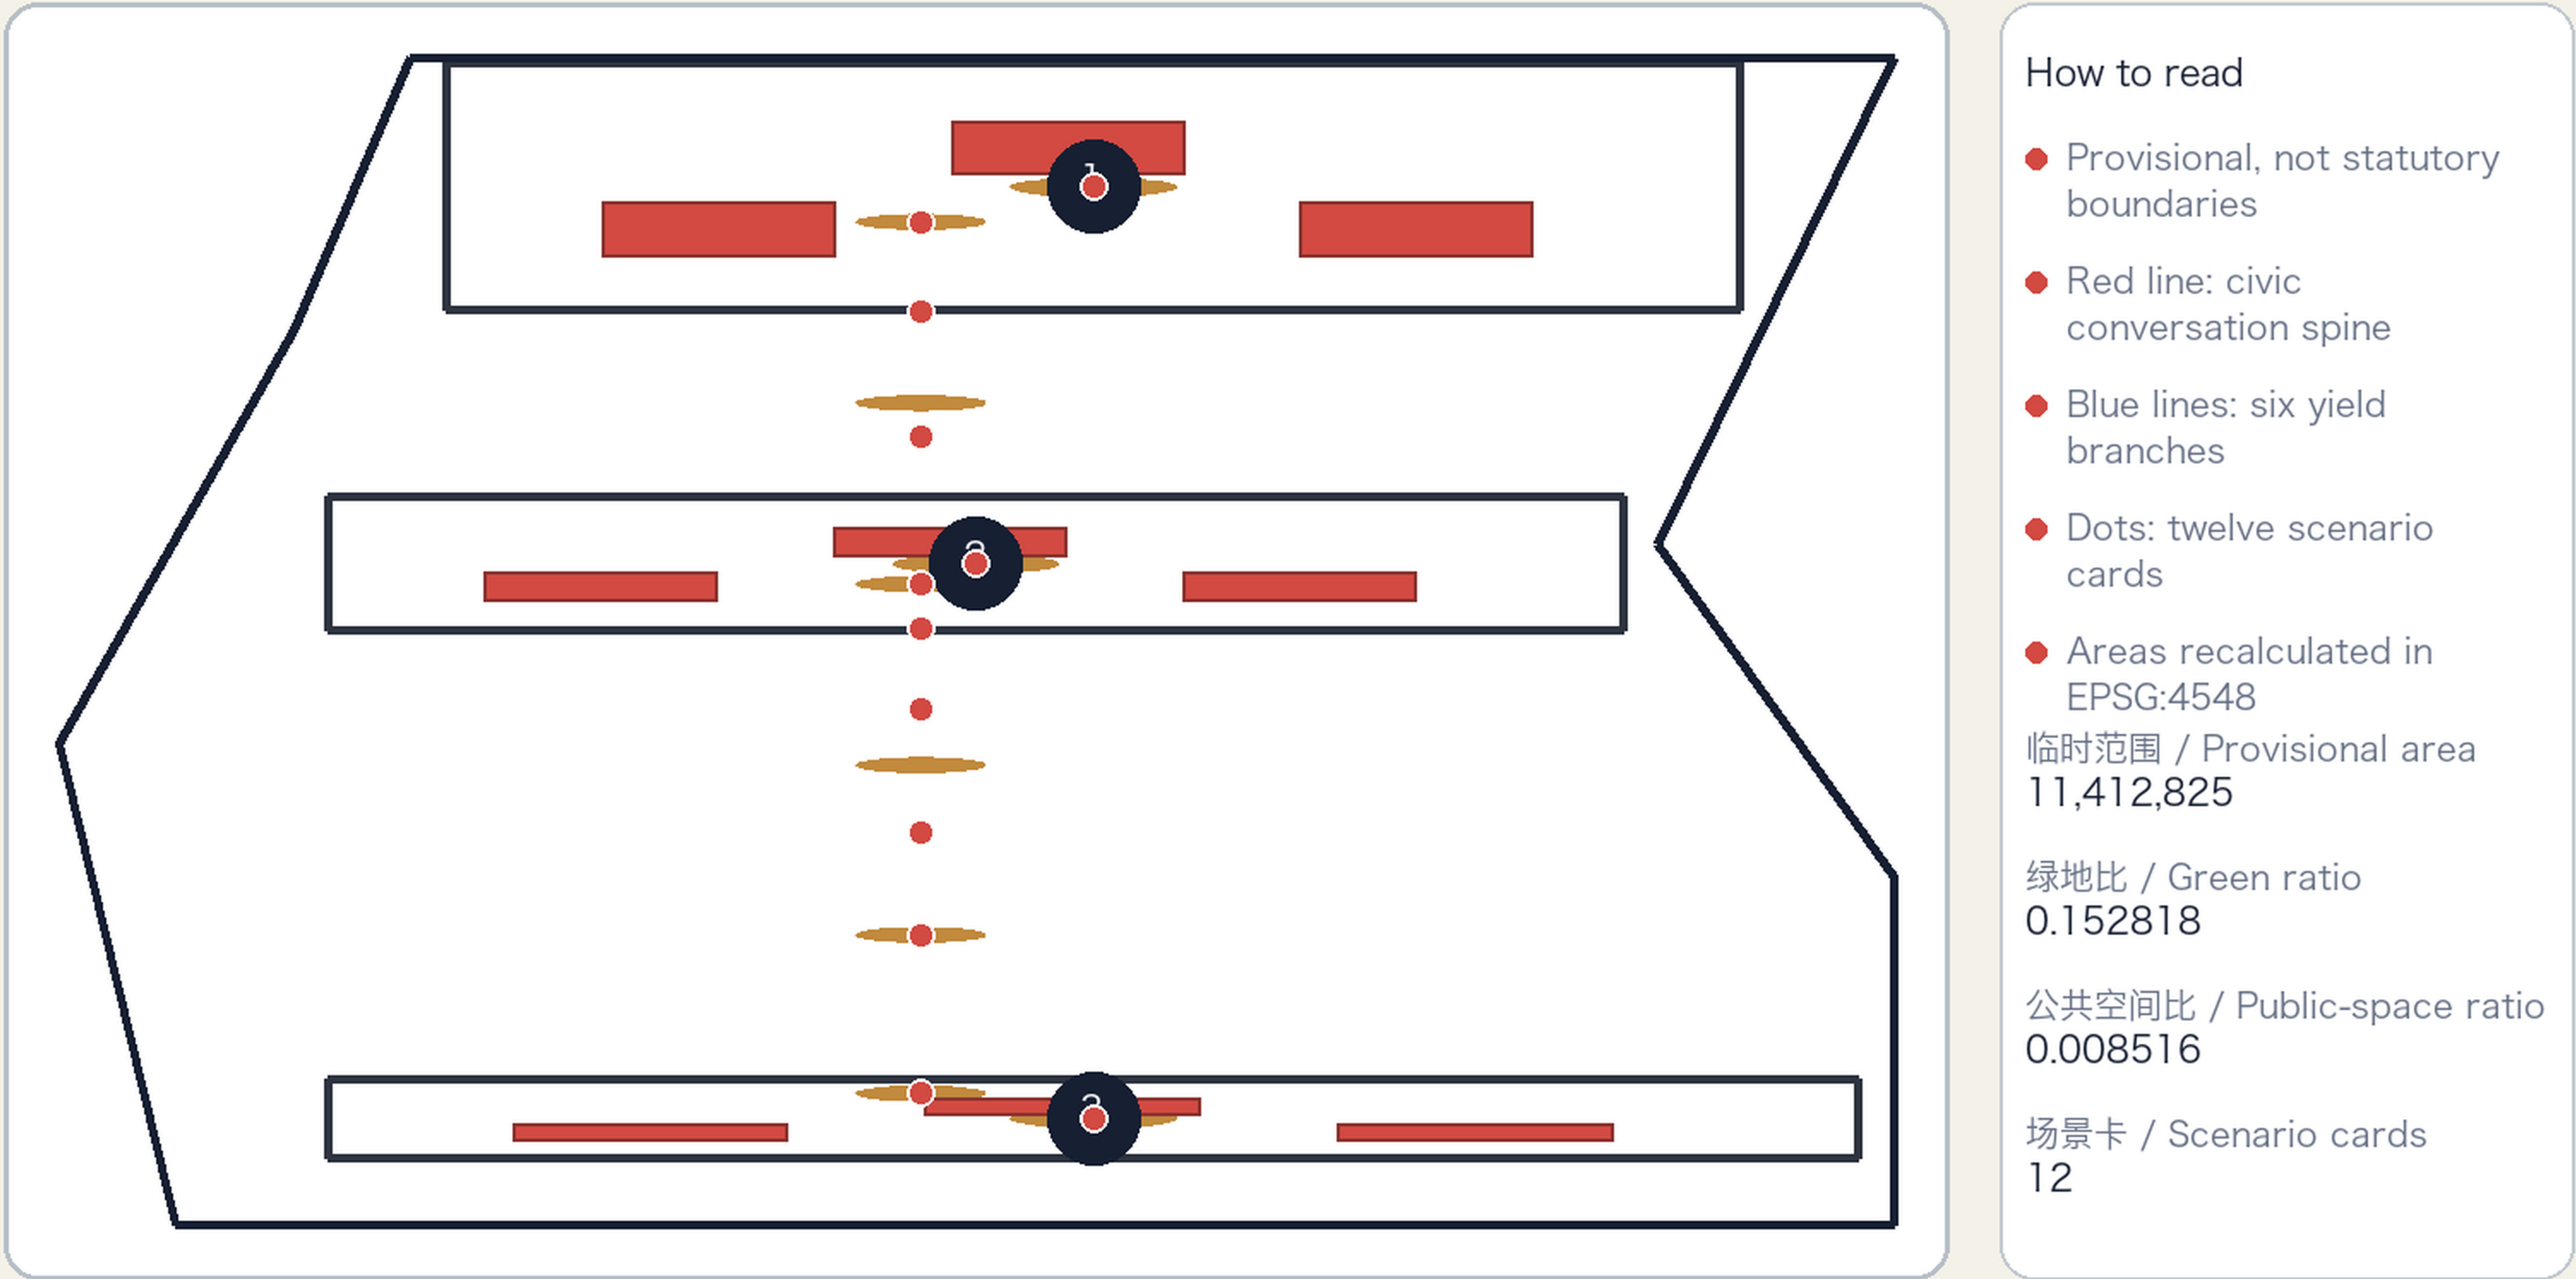

Derived from the same GeoJSON and metrics.json.

Seven land-use interfaces cover the provisional site. AI functions operate as overlays within research, education, culture, commerce, community, green, road, and plaza uses rather than inventing a statutory AI land-use class.

Three key-area rounds: validation, co-creation, and exchange

AI does not interrupt. The city yields first. Everyone gets a next turn.

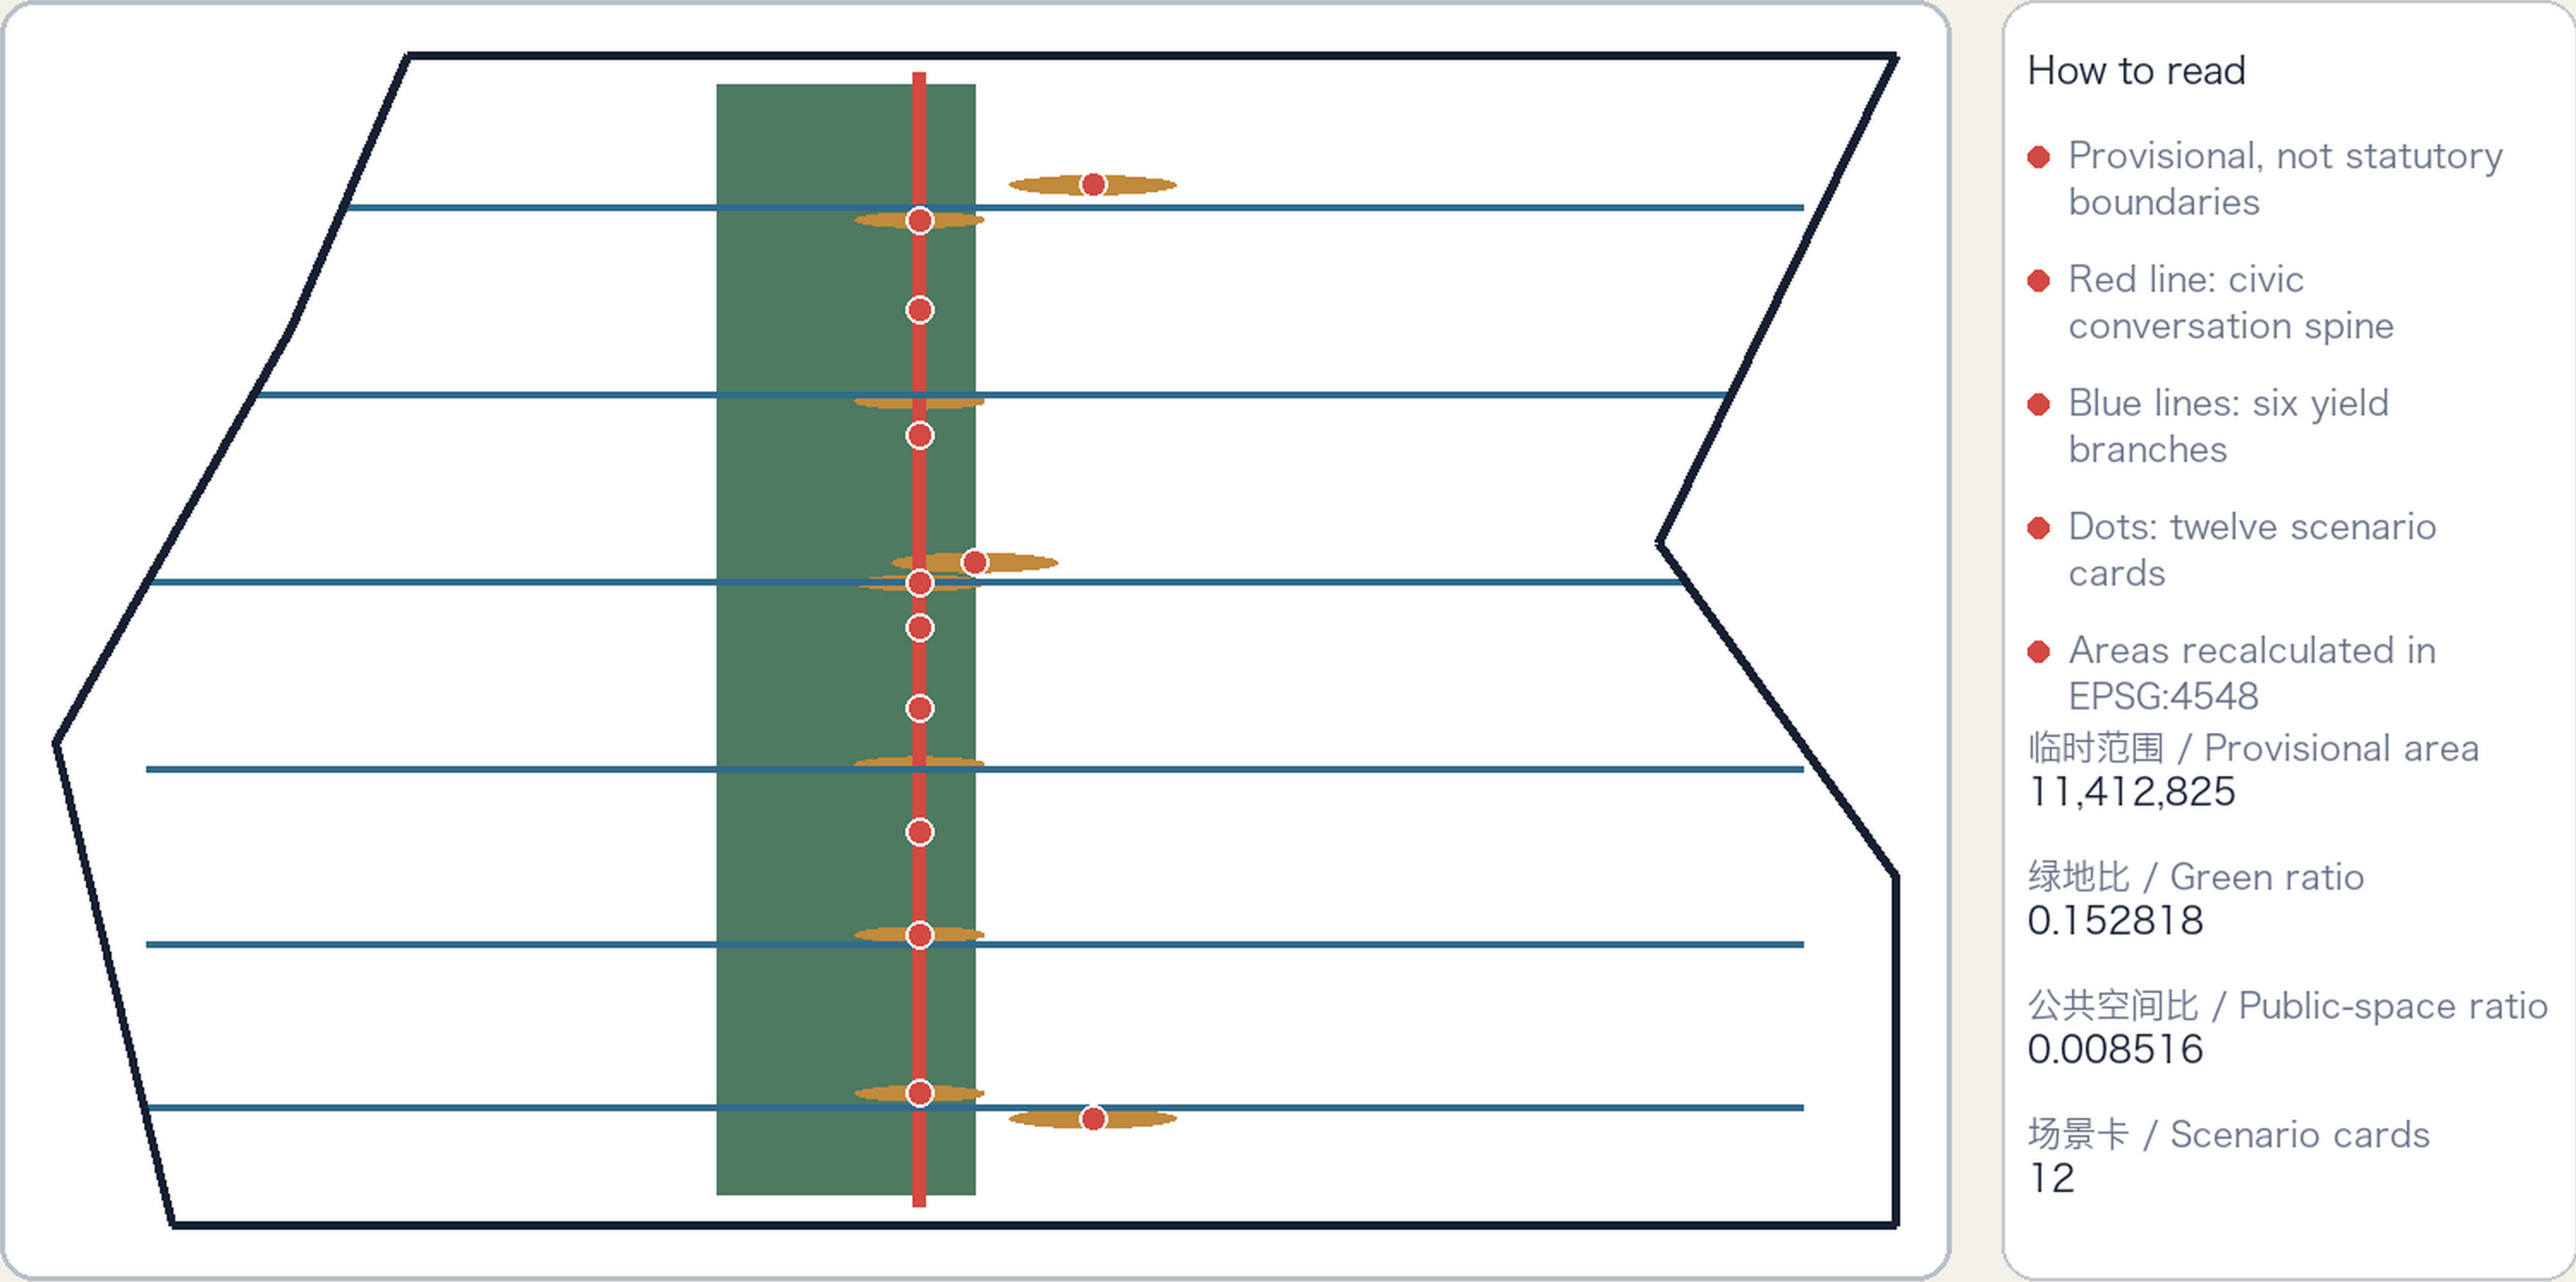

Derived from the same GeoJSON and metrics.json.

The three key areas teach yielding, let everyone speak, and hand the stage to the city. Nine building objects are capacity tests only; they are not building-level retain-renovate-demolish, intensity, or approval claims.

Six yield courts and the blue-green walking and cycling network

AI does not interrupt. The city yields first. Everyone gets a next turn.

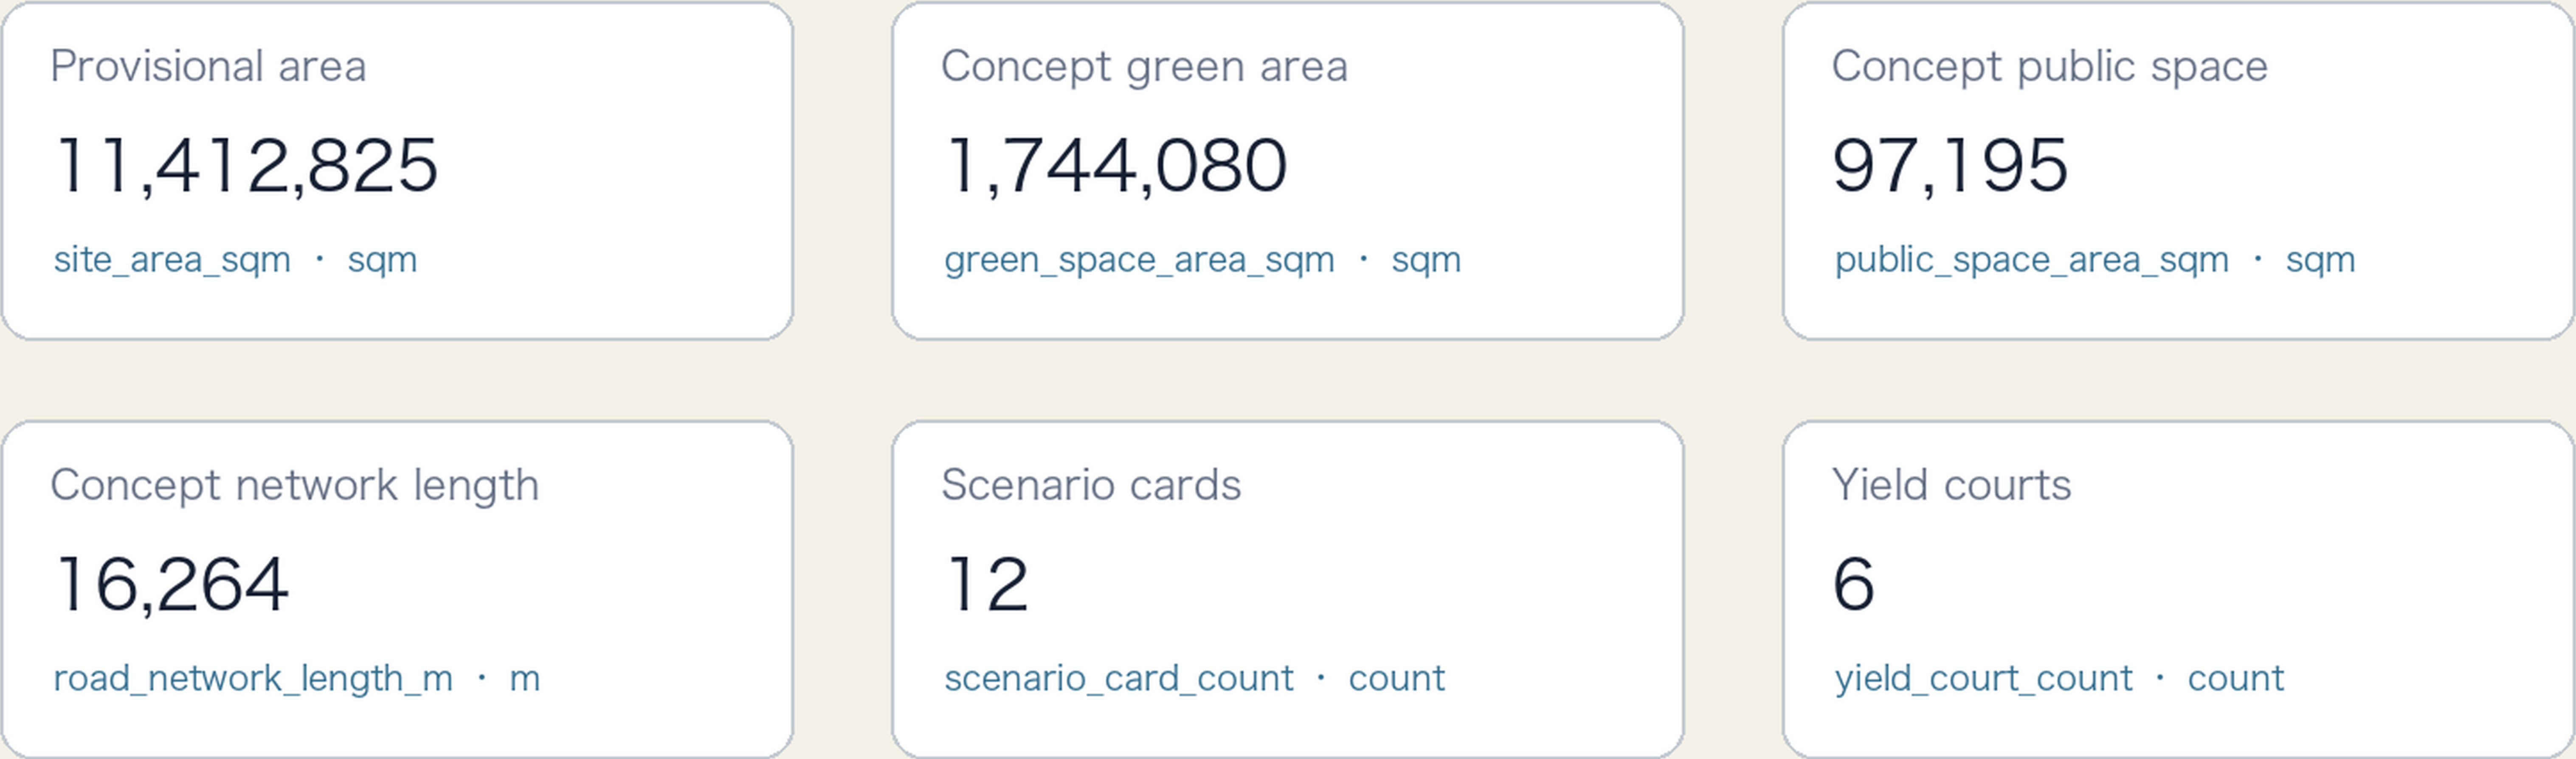

Derived from the same GeoJSON and metrics.json.

Six yield branches and the blue-green corridor coordinate commuting, robots, events, and public services. Six yield courts retain ordinary passage, on-site stop officers, and staffed service desks.

Metric Recalculation and Evidence Chain

Calculable values come from submitted geometry; statutory and operating performance remain pending.

Pending official or operating evidence

geometry → EPSG:4548 → metrics.json → figures/HTML/PDF → manifest hashes

Calculable metrics come from EPSG:4548 geometry. FAR, height, Building Coverage Ratio, demolition, and operating performance remain pending official evidence or field samples.
