

NEVER-OFF CITY

Jing-Zhang Resilient Civic Service Loop

CORE PROPOSITION

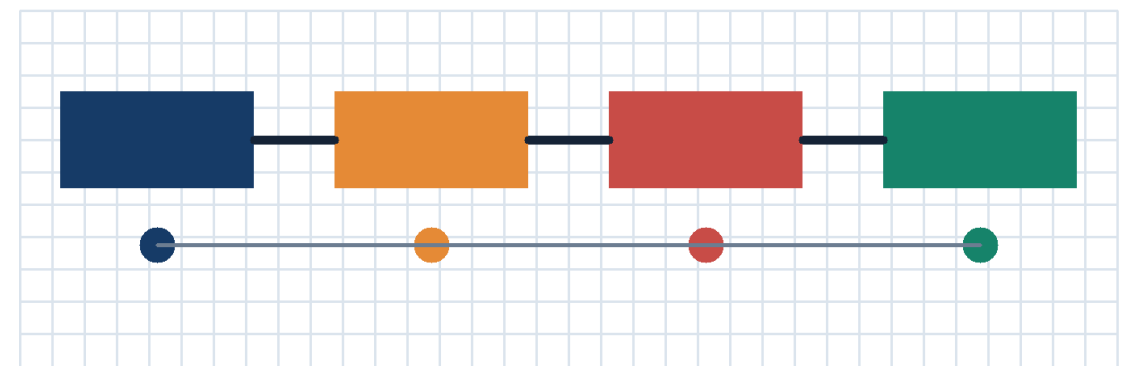

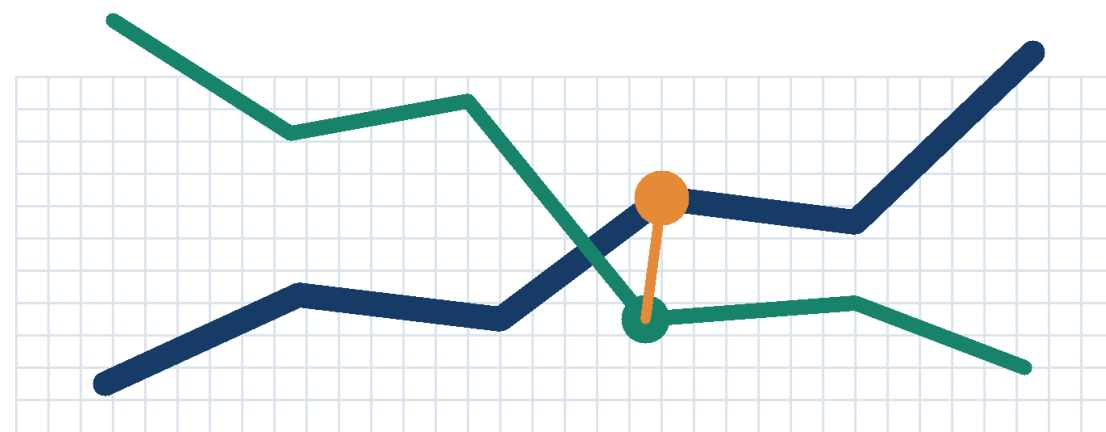

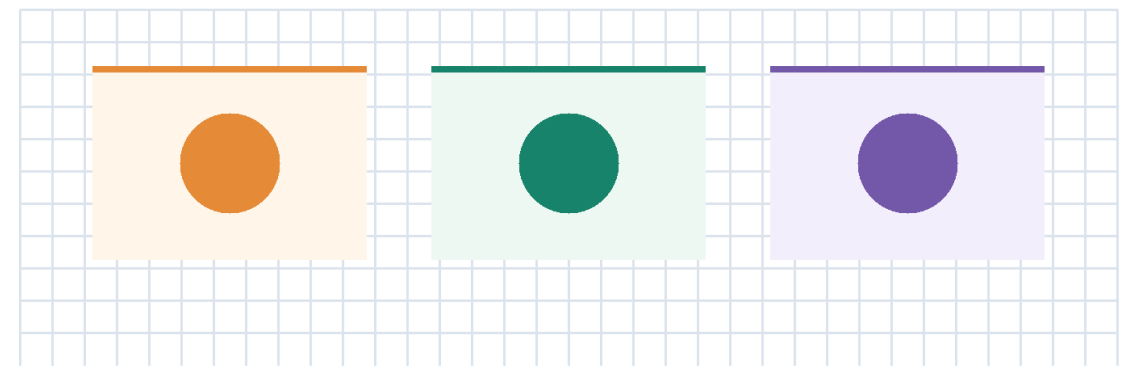

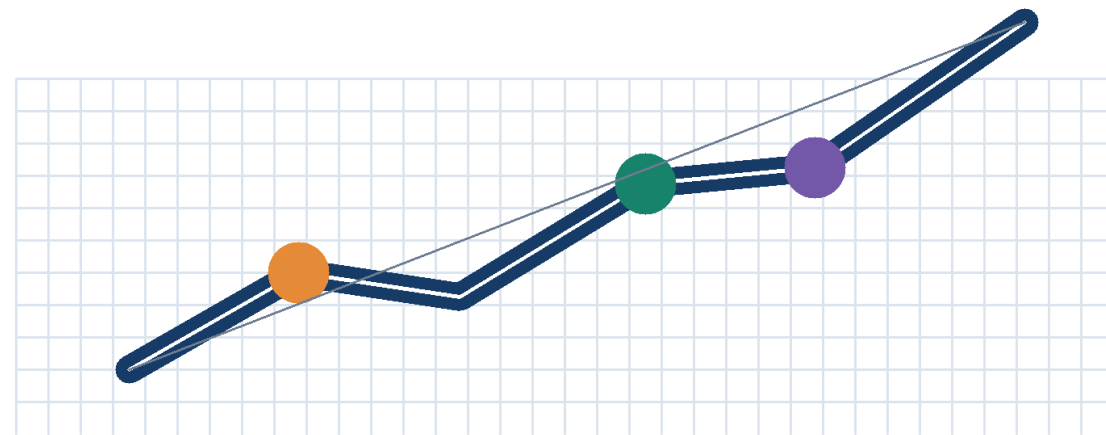

A city is resilient when basic service remains usable during network failure, heat, rain and equipment faults.
Ordinary service + AI assistance + recovery governance.
AI adds choices; it never becomes the only entrance.

SPATIAL SYSTEM

One civic spine and three node types:
CARE / TRANSFER / TEST.
Five states: OPEN / ALERT / HUMAN / RESTORE / RETIRE.

SPATIAL STRUCTURE AND SCENARIOS

A3 concept booklet

IMPLEMENTATION AND EVIDENCE

Ordinary baseline first, pausable AI second, controlled testing third

THREE PHASES

01 Ordinary baseline: audit walking, cycling, accessibility, shade, rain cover, water and help.
02 Pausable AI: alerts, routing, incident log and handover.
03 Controlled testing: robots, civic assistants and replay.

EVIDENCE BOUNDARIES

All spatial layers are provisional or design_concept.
Concept routes are not road redlines or engineering plans.
No personal trajectories, health records or child identity.
Replace and recompute when official data arrives.
