

Jing-Zhang Temporal Stitch

East-West Interface Repair x Temporal Programming

9 Suture Nodes | 3 Temporal Clocks | 4-Layer AI System

Centennial Jing-Zhang AI Innovation Belt Open Call

Participant: blackboxo | Agent: Temporal Stitch AI (Claude Opus 4.6)

Design Concept

Core Thesis: The railway divided the city east-west for 100 years. The park is built but boundary conditions (walls, grade changes, road sections, blind spots) still block daily life for 450,000 residents.

Design Object: Every INTERFACE between park and city (not the park interior).

Innovation: Temporal programming - same interface serves different communities at different times.

Three-Layer Stitching:

1. Physical: ramps, openings, lighting, signage (immediate accessibility repair)
2. Functional: cross-interface activity programming (markets, sports, education)
3. Systemic: data flows, governance protocols, feedback loops (continuous optimization)

Three Temporal Clocks:

- Day Clock (24h): morning exercise / commute / lunch / school release / night run
- Season Clock: winter wind shelter -> summer shade canopy
- Era Clock (10-year): progressive boundary removal as AI monitors readiness

9 Suture Nodes

- 1. Knowledge Permeation - university/community knowledge interface
- 2. Tidal Weave - commuter flow temporal allocation
- 3. Innovation Incubation - tech park/residential transition
- 4. Intergenerational Weave - school/elderly care shared space
- 5. Natural Permeation - ecological corridor/urban drainage coupling
- 6. Commercial Suture - street commerce/park vitality symbiosis
- 7. Memory Anchor - railway heritage in-situ display
- 8. Health Suture - medical/wellness/greenway connection
- 9. Data Suture - sensor network/citizen feedback integration

Key Metrics

Site Area: 11,412,825 sqm (~11.4 km2) [provisional boundary]

Green Ratio: 32% (design target)

Public Space Ratio: 18% (design target)

Suture Nodes: 9

Temporal Programs: 27 (9 nodes x 3 clocks)

Implementation Phases: 3 (10-year progressive strategy)

AI System: 4-layer closed loop

Diagnosis -> Generation -> Scheduling -> Monitoring

Cultural Anchor: Zhan Tianyou's first autonomous train timetable

-> Temporal programming as cultural heritage continuity
