

Right-to-Question Public AI Loop

V0.3 PROTOTYPE

A conceptual public route that connects notice, walking, questioning, human review, and public return. It is not a redline plan.

Provisional spatial anchors only. Replace all polygons and recalculate after official or cleared geometry is available.

One Loop Grammar from Brand to Decision

Three cores, two wings, and five loops become a design grammar for public space, data boundaries, human duty, and reusable evidence.

Three Prototype Atlas: Three Public Interfaces

PROTOTYPE ATLAS

Each conceptual mini-plan joins spatial action, user sequence, operating responsibility, and a hard stop. It is not an engineering or regulatory plan.

Zhongzhiyuan

Memory and evidence gateway

Enter - read sources - choose whether to participate

HARD STOP

No cleared venue, source basis, or human owner: do not start

AI Origin

Question and co-creation commons

Notice - offline/anonymous feedback - co-prioritise

HARD STOP

Inaccessible feedback, profiling, or scope creep: pause

Dazhongsi

Human review and service corner

Explain - review - respond - publish a revision

HARD STOP

No responsible responder, appeal path, or recovery owner: stop

Plans are conceptual relationship diagrams. Provisional key-area extents remain low-contrast dashed context and must be redrawn after official or cleared plans arrive.

From a Walking Break to a Public Return

FLAGSHIP PILOT

The flagship pilot does not track personal routes. It combines manual walk-throughs, voluntary anonymous feedback, accessibility review, and reversible signage.

Observe

Manual walk-through and accessibility check

Explain

Visible data boundary and non-digital entry

Feedback

Anonymous, named, or paper feedback

Review

Professionals confirm reversible action

Return

Publicly state closed, paused, or pending

Three exits, not one success story

GO: evidence, owner, accessibility, and human review all hold

PAUSE: evidence or experience is insufficient; repair before deciding

STOP: safety, data, or appeal chain fails; withdraw reversible components

Metrics Are Not Promises: They Form a Recalculation and Pilot Evidence Chain

Spatial values are recalculated from provisional geometry in EPSG:4548. Pilot measures are public-service evidence, not investment or demand forecasts.

Unknowns remain unknown: statutory FAR, height, road redlines, ownership, utilities, and investment are not made credible by invented numbers.

Regional Collaboration Is an Activatable Interface, Not a Partnership

REGIONAL INTERFACE

Each interface states the public issue, reusable capability, evidence needed for activation, and an explicit non-promise.

90-Day Pilot Charter: Approve One Small Decision, Not a Whole City

DECISION CHARTER

The flagship walking-break diagnostic is a protocol with roles, data duration, appeal, pause/restart, and handover assets.

Four gates

Failing a critical gate is not solved by tuning an algorithm: pause or stop, state the reason, and retain human service.

Concept Visuals for Four Public Prototypes

CONCEPT VISUALS

User-provided generative concept visuals express public experience only; they are not site records, surveys, permits, or built projects.

01 Memory and evidence gateway

02 Question and co-creation commons

03 Human-review service corner

04 Walking and accessibility-break diagnostic

See [concept-render-provenance.json](#) for the declared model, prompt boundary, and non-site disclaimer; images never replace data, controls, or professional judgement.
