

Jing-Zhang Civic Loop

Bilingual concept boards / provisional constraint

This is a conceptual proposal, not an approval.

Structure: one belt, three nodes, scenario points, and a blue-green slow-mobility loop.

The three key areas host safe testing, open collaboration, and industry showcase.

Ten scenario cards, five personas, and three industry validation scenarios connect AI to everyday civic services, always with non-account alternatives, human assistance, stop, and appeal paths.

Official boundaries, ownership, road redlines, utilities, heritage controls, budget, operators, and approvals remain pending; all metrics must be recalculated when official data arrives.
